Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

Glossary of Defined Terms

Term	Definition
ABS	Asset-backed securities
ACL	Allowance for credit losses
AFS	Available-for-sale
Agency MBS	Mortgage-backed securities issued by a U.S. government agency or GSE
ALLL	Allowance for loan and lease losses
AOCI	Accumulated other comprehensive income (loss)
BOLI	Bank-owned life insurance
Basel III Rules	Rules issued by the FRB, OCC and FDIC on capital adequacy and liquidity requirements in the U.S for banking organizations.
BB&T	BB&T Corporation and subsidiaries (changed to "Truist Financial Corporation" effective with the Merger)
BCBS	Basel Committee on Banking Supervision
BHC	Bank holding company
BHCA	Bank Holding Company Act of 1956, as amended
Branch Bank	Branch Banking and Trust Company (changed to "Truist Bank" effective with the Merger)
CAP	Capital Adequacy Process
CARES Act	The Coronavirus Aid, Relief, and Economic Security Act
CCAR	Comprehensive Capital Analysis and Review
CCP	Central clearing party
CD	Certificate of deposit
CDO	Collateralized debt obligation
CDS	Credit default swaps
CECL	Current expected credit loss
CEIO	Credit-enhancing interest-only strip
CET1	Common equity tier 1
CFPB	Consumer Financial Protection Bureau
CFTC	Commodity Futures Trading Commission
CLO	Collateralized loan obligation
Company	Truist Financial Corporation and subsidiaries (interchangeable with "Truist" below)
COVID-19	Coronavirus disease 2019
CRA	Community Reinvestment Act of 1977
CRE	Commercial real estate
CSA	Credit support annex
CVA	Credit valuation adjustment
Dodd-Frank Act	Dodd-Frank Wall Street Reform and Consumer Protection Act
DTA	Deferred tax asset
DVA	Debit valuation adjustment
FDIC	Federal Deposit Insurance Corporation
FFELP	Federal Family Education Loan Program
FFIEC	Federal Financial Institutions Examination Council
FHA	Federal Housing Administration
FHC	Financial Holding Company
FINRA	Financial Industry Regulatory Authority
FRB	Board of Governors of the Federal Reserve System
GAAP	Accounting principles generally accepted in the United States of America
GSE	U.S. government-sponsored enterprise
HVCRE	High volatility commercial real estate
ISDA	International Swaps and Derivatives Association, Inc.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

Term	Definition
LHFI	Loans and leases held for investment
LIBOR	London Interbank Offered Rate
MBS	Mortgage-backed securities
MD&A	Management's Discussion and Analysis
MDB	Multilateral development bank
Merger	Merger of BB&T and SunTrust effective December 6, 2019
MRLCC	Market Risk, Liquidity and Capital Committee
MSR	Mortgage servicing right
NCOCB	North Carolina Office of the Commissioner of Banks
NIM	Net interest margin
NPA	Nonperforming asset
NYSE	NYSE Euronext, Inc.
OCC	Office of the Comptroller of the Currency
OTC	Over-the-counter
Parent Company	Truist Financial Corporation, the parent company of Truist Bank and other subsidiaries
PCI	Purchased credit impaired loans
PSE	Public sector entity
RMC	Risk Management Committee
PFE	Potential future exposure
PSE	Public sector entity
Rule	Basel III Final Rule
RWA	Risk-weighted assets
SEC	Securities and Exchange Commission
SFA	Supervisory Formula Approach
SIFMA	Securities Industry and Financial Markets Association
SPE	Special purpose entity
SunTrust	SunTrust Banks, Inc.
SSFA	Simplified Supervisory Formula Approach
Tailoring Rules	Final rules changing the applicability thresholds for regulatory capital and liquidity requirements, issued by the OCC, FRB, and FDIC, together with the final rules changing the applicability thresholds for enhanced prudential standards issued by the FRB
TDR	Troubled debt restructuring
Truist	Truist Financial Corporation and subsidiaries, formerly BB&T Corporation
Truist Bank	Truist Bank, formerly Branch Banking and Trust company
U.S.	United States of America
U.S. Treasury	United States Department of the Treasury

Introduction

Truist Financial Corporation is a purpose-driven financial services company committed to inspire and build better lives and communities. Truist serves approximately 12 million households with leading market share in many high-growth markets in the country. The Company offers a wide range of services including retail, small business and commercial banking; asset management; capital markets; commercial real estate; corporate and institutional banking; insurance; mortgage; payments; specialized lending and wealth management. Headquartered in Charlotte, North Carolina, Truist is the sixth-largest commercial bank in the U.S.

Truist Bank, Truist's largest subsidiary, was chartered in 1872 and is the oldest bank headquartered in North Carolina. Truist Bank provides a wide range of banking and trust services for consumer and commercial clients in its geographic markets through 2,957 offices as of March 31, 2020 and its digital platform.

As a BHC, Truist is subject to regulation under the BHCA and regulation, examination and supervision by the FRB. Truist Bank, a North Carolina state-chartered commercial bank that is not a member of the Federal Reserve System, is subject to regulation, supervision and examination by the NCOCB, the FDIC and the CFPB.

Truist and certain of its subsidiaries and affiliates, including those that engage in derivatives transactions, securities underwriting, market making, brokerage, investment advisory and insurance activities, are subject to other federal and state laws and regulations as well as supervision and examination by other federal and state regulatory agencies and other regulatory authorities, including the SEC, CFTC, FINRA and the NYSE.

Pillar 3 Report Overview

The Basel framework consists of a three "Pillar" approach:

- Pillar 1 establishes minimum capital requirements, defines eligible capital instruments and prescribes rules for calculating RWA.
- Pillar 2 requires banks to have an internal capital adequacy assessment process and requires that banking supervisors evaluate each bank's overall risk profile as well as its risk management and internal control processes.
- Pillar 3 encourages market discipline through disclosure requirements which allow market participants to assess the risk and capital profiles of banks.

This report provides information about Truist's capital structure, capital adequacy, risk exposures, RWA and risk management framework. It should be read in conjunction with Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended March 31, 2020 and the Consolidated Financial Statements for Bank Holding Companies - FR Y-9C for the period ended March 31, 2020. Truist's SEC filings are located on its website at ir.truist.com/sec-filings.

The cross reference table located in the Appendix specifies the location of disclosures required by the Rule.

Basis of Consolidation

The basis of consolidation used for regulatory reporting is the same as that used under GAAP. The disclosures contained herein are on a consolidated basis unless otherwise noted. There are no entities within Truist that are deconsolidated for regulatory reporting, or whose capital is deducted. These disclosures have not been audited by the Company's external auditors.

See "Principles of Consolidation" in "Note 1. Basis of Presentation" in Truist's March 31, 2020 Form 10-Q for more information on the basis of consolidation.

Government Response to COVID-19

Congress, the FRB and the other U.S. state and federal financial regulatory agencies have taken actions to mitigate disruptions to economic activity and financial stability resulting from COVID-19 and can be expected to continue to evolve such approaches and requirements in ways that further impact the business of the Company. The descriptions below summarize certain significant government actions taken in response to the COVID-19 pandemic. The descriptions are qualified in their entirety by reference to the particular statutory or regulatory provisions or government programs summarized.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

The CARES Act

The CARES Act was signed into law on March 27, 2020. Among other provisions, the CARES Act includes funding for the Small Business Administration to expand lending, relief from certain U.S. GAAP requirements to allow COVID-19-related loan modifications to not be categorized as TDR and a range of incentives to encourage deferment, forbearance or modification of consumer credit and mortgage contracts. One of the key CARES Act programs is the Paycheck Protection Program, which temporarily expands the Small Business Administration's business loan guarantee program through June 30, 2020. Paycheck Protection Program loans are available to a broader range of entities than ordinary Small Business Administration loans, require six-month deferral of principal and interest repayment, and the loan may be forgiven in an amount equal to payroll costs and certain other expenses during an eight-week covered period.

The CARES Act contains additional protections for homeowners and renters of properties with federally backed mortgages, including a 60-day moratorium on the initiation of foreclosure proceedings beginning on March 18, 2020 and a 120-day moratorium on initiating eviction proceedings effective March 27, 2020. Borrowers of federally backed mortgages have the right under the CARES Act to request up to 360 days of forbearance on their mortgage payments if they experience financial hardship directly or indirectly due to the coronavirus-related public health emergency.

Also pursuant to the CARES Act, the U.S. Treasury has the authority to provide loans, guarantees and other investments in support of eligible businesses, states and municipalities affected by the economic effects of COVID-19. Some of these funds have been used to support the several FRB programs and facilities described below or additional programs or facilities that are established by the FRB under its Section 13(3) authority and meeting certain criteria.

In addition to authorizing several programs to provide loans, guarantees and other investments in support of eligible organizations, states and municipalities affected by the economic effects of the COVID-19 pandemic, the CARES Act also includes several measures that temporarily adjust existing laws or regulations. These include providing the FDIC with additional authority to guarantee the deposits of solvent insured depository institutions held in noninterest-bearing business transaction accounts to a maximum amount specified by the FDIC, reinstating the FDIC's Temporary Liquidity Guarantee Authority to guarantee debt obligations of solvent insured depository institutions or depository institution holding companies, and temporarily allowing the Treasury to fully guarantee money market mutual funds. The CARES Act also provides financial institutions with the option to suspend certain GAAP requirements for coronavirus-related loan modifications that would otherwise constitute TDRs and further requires the federal banking agencies to defer to financial institutions' determinations in making such suspensions.

FRB Actions

The FRB has taken a range of actions to support the flow of credit to households and businesses. For example, on March 15, 2020, the FRB reduced the target range for the federal funds rate to 0 to 0.25% and announced that it would increase its holdings of U.S. Treasury securities and agency mortgage-backed securities and begin purchasing agency commercial mortgage-backed securities. The FRB has also encouraged depository institutions to borrow from the discount window and has lowered the primary credit rate for such borrowing by 150 basis points while extending the term of such loans up to 90 days. Reserve requirements have been reduced to zero as of March 26, 2020.

In addition, the FRB has established, or has taken steps to establish, a range of facilities and programs to support the U.S. economy and U.S. marketplace participants in response to economic disruptions associated with COVID-19. Through these facilities and programs, the FRB, relying on its authority under Section 13(3) of the Federal Reserve Act, has taken steps to directly or indirectly purchase assets from, or make loans to, U.S. companies, financial institutions, municipalities and other market participants.

FRB facilities and programs established, or in the process of being established, include:

- a Paycheck Protection Program Liquidity Facility to provide financing related to Paycheck Protection Program loans made by banks;
- a Main Street New Loan Facility and a Main Street Expanded Loan Facility to purchase loan participations, under specified conditions, from banks lending to small and medium sized U.S. businesses;
- a Primary Dealer Credit Facility to provide liquidity to primary dealers through a secured lending facility;
- a Commercial Paper Funding Facility to purchase the commercial paper of certain U.S. issuers;
- a Primary Market Corporate Credit Facility to purchase corporate bonds directly from, or make loans directly to, eligible participants;
- a Secondary Market Corporate Credit Facility to purchase corporate bonds trading in secondary markets, including from exchange-traded funds, that were issued by eligible participants;
- a Term Asset-Backed Securities Loan Facility to make loans secured by asset-backed securities;

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

- a Municipal Liquidity Facility to purchase bonds directly from U.S. state, city and county issuers; and
- a Money Market Mutual Fund Liquidity Facility to purchase certain assets from, or make loans to, financial institutions providing financing to eligible money market mutual funds.

These facilities and programs are in various stages of development, and the Company and Truist Bank may participate in some or all of them, including as an agent or intermediary on behalf of clients or customers or in an advisory capacity.

Capital Structure

Truist and Truist Bank are subject to certain risk-based capital and leverage ratio requirements under the Rule adopted by the FRB, for Truist, and by the FDIC, for Truist Bank. These quantitative calculations are minimums, and the FRB and FDIC may determine that a banking organization, based on its size, complexity, or risk profile, must maintain a higher level of capital in order to operate in a safe and sound manner. Failure to be well capitalized or to meet minimum capital requirements could result in certain mandatory and possible additional discretionary actions by regulators that, if undertaken, could have an adverse material effect on Truist's operations or financial condition. Failure to be well capitalized or to meet minimum capital requirements could also result in restrictions on Truist's or Truist Bank's ability to pay dividends or otherwise distribute capital or to receive regulatory approval of applications.

As of March 31, 2020, Truist and Truist Bank qualified as well capitalized, with capital levels in excess of the minimum regulatory capital requirements.

Definition of Capital

Regulatory capital includes the following elements:

- CET1 capital includes primarily common shareholders' equity subject to certain regulatory adjustments and deductions, including with respect to goodwill, intangible assets, certain deferred tax assets, AOCI, and the impact of the current expected credit loss transition provision.
- Tier 1 capital is comprised primarily of CET1 capital, perpetual preferred stock and certain qualifying capital instruments.
- Tier 2 capital includes primarily qualifying subordinated debt and qualifying ACL. Tier 2 capital also includes, among other things, certain trust preferred securities.

A reconciliation of total shareholders' equity to CET1 capital, Tier 1 capital, Tier 2 capital and Total capital is presented in Truist's March 31, 2020 Form FR Y-9C. Refer to the "Consolidated Balance Sheets" in Truist's March 31, 2020 Form 10-Q for the components of total shareholders' equity.

Capital in Subsidiaries

At March 31, 2020, the amount of surplus capital of insurance subsidiaries included in regulatory capital was not material.

RWA

Under the Rule, Truist's and Truist Bank's assets, exposures, and certain off-balance sheet items are subject to risk weights used to determine the institutions' RWA. These RWA are used to calculate the required minimum capital ratios for Truist and Truist Bank. See the "Capital Ratios" section herein for further discussion of the capital ratio components.

The RWA calculation is used in determining the institution's capital requirement. RWA under the standardized approach are generally based on supervisory risk weightings that vary by counterparty type and asset class. The predefined risk weight classifications generally range from 0% for U.S. government securities to 600% for certain equity exposures, with a maximum risk weight classification of 1,250% for certain securitization exposures.

Market Risk Rule

In addition, certain large banking organizations with trading assets and liabilities above certain thresholds, including Truist, are subject to the Market Risk Rule and must adjust their risk-based capital ratios to reflect the market risk of their trading activities. Refer to the "Market Risk" section in the MD&A of the Company's Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended March 31, 2020 for additional disclosures related to market risk management.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

Components of RWA

The following table presents Truist's RWA by exposure type at March 31, 2020:

Table 3-1
Basel III Standardized Transitional Approach RWA

(dollars in millions)	March 31, 2020
Credit risk (1):	
Corporate and consumer exposures (2)	\$ 301,230
Exposure to residential mortgage loans	46,566
Equity exposures	13,502
Exposure to OTC derivatives	5,929
Exposure to GSEs	5,451
Exposure to PSEs	4,848
Exposure to HVCRE loans	3,297
Exposure to sovereign entities	2,146
Securitization exposures	1,924
Exposure to past due loans	1,085
Exposure to depository institutions, foreign banks and credit unions	879
Exposure to statutory multifamily mortgage	751
Unsettled transactions	51
Cleared transactions	50
Total standardized credit risk	387,709
Total standardized market risk	2,639
Total standardized RWA	\$ 390,348

(1) Truist does not have any exposures to supranational entities and MDBs or default fund contributions.

(2) Corporate and consumer exposures also include other assets.

See the Company's March 31, 2020 Y-9C, Schedule HC-R Part I and Part II, on the FFIEC website for disclosures required by Basel III related to the following:

- Total standardized RWA by exposure type, including the related on- and off-balance sheet exposure;
- Standardized market RWA as calculated under the Market Risk Rule. Additional details are also available in the FFIEC 102 report on the FFIEC's website; and
- CET1, Tier 1 capital, and Total risk-based capital components and related calculations.

Capital Ratios

Under capital adequacy guidelines and the regulatory framework for prompt corrective action, the Company must meet specific capital guidelines that involve quantitative measures of assets, liabilities and certain off-balance sheet items calculated pursuant to regulatory directives. Truist's capital amounts and classification also are subject to qualitative judgments by the regulators about components, risk weightings and other factors. Truist is in full compliance with these requirements. Banking regulations also identify five capital categories for insured depository institutions: well-capitalized, adequately capitalized, undercapitalized, significantly undercapitalized and critically undercapitalized. At March 31, 2020, Truist and Truist Bank were classified as "well-capitalized," and management believes that no events or changes have occurred subsequent to period end that would change this designation.

To avoid certain regulatory restrictions, Truist and Truist Bank are required to maintain minimum ratios of CET1 ratio of 4.5%, Tier 1 capital ratio of 6%, Total capital to risk-weighted assets ratio of 8%, Tier 1 capital to quarterly average tangible assets (leverage ratio) of 4%, and Tier 1 capital to total exposures (supplementary leverage) of 3%.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

Capital conservation buffer

Truist and Truist Bank are also subject to a 2.5% capital conservation buffer for CET1, Tier 1 capital and Total capital. The capital conservation buffer is an amount above the minimum levels designed to ensure that banks remain well-capitalized, even in adverse economic scenarios. On March 4, 2020, the FRB issued a final rule discussed further below under the "Stress Capital Buffer Requirements" section. Beginning in the 2020 CCAR cycle, the stress capital buffer replaced the existing capital conservation buffer.

For certain large banking organizations, the capital conservation buffer could be supplemented by a countercyclical capital buffer of up to an additional 2.5% of risk-weighted assets. For Truist, this buffer is currently set at zero. An FRB policy statement establishes the framework and factors the FRB would use in setting and adjusting the amount of the countercyclical capital buffer. Covered banking organizations would generally have 12 months after the announcement of any increase in the countercyclical capital buffer to meet the increased buffer requirement, unless the FRB determines to establish an earlier effective date. See additional discussion related to the capital conservation buffer in the Company's March 31, 2020 Form 10-Q.

The minimum, well capitalized and capital conservation buffer ratio requirements at March 31, 2020 are as follows:

Table 3-2
Capital Requirements and Targets
March 31, 2020

	Minimum Capital	Well Capitalized		Minimum Capital Plus Capital Conservation Buffer	Truist Targets	
		Truist	Truist Bank		Interim	Stressed
CET1	4.5 %	NA	6.5 %	7.0 %	8.0 %	7.0 %
Tier 1 capital	6.0	6.0	8.0	8.5	9.3	8.5
Total capital	8.0	10.0	10.0	10.5	11.3	10.5
Leverage ratio (1)	4.0	NA	5.0	N/A	7.5	7.0
Supplementary leverage ratio (2)	3.0	NA	NA	NA	6.5	6.0

- (1) Leverage ratio is equal to the ratio of Tier 1 capital to quarterly average assets (net of goodwill, certain other intangible assets, and certain other deductions).
(2) Truist became subject to the supplementary leverage ratio as of January 1, 2020.

The following table presents regulatory capital and risk-based capital ratios for Truist and Truist Bank at March 31, 2020:

Table 3-3
Capital Ratios
March 31, 2020

(dollars in millions)	Ratio	Amount
Truist		
CET1	9.3 %	\$ 36,396
Tier 1 capital	10.5	40,993
Total capital	12.7	49,395
Leverage	9.0	40,993
Supplementary leverage ratio	7.8	40,993
Truist Bank		
CET1	10.4 %	\$ 39,601
Tier 1 capital	10.4	39,601
Total capital	12.2	46,535
Leverage	9.0	39,601
Supplementary leverage ratio	7.8	39,601

Supplementary Leverage Ratio

In response to the COVID-19 pandemic, the FRB has adopted an interim final rule that temporarily changes the supplementary leverage ratio to exclude U.S. treasury securities and deposits at Federal Reserve Banks from the calculation of a firm's leverage exposure. The interim final rule applies to BHCs and became effective April 1, 2020 and will remain in effect through March 31, 2021.

Other capital ratio considerations

Capital Simplification

In July 2019, the FDIC, the FRB and the OCC issued final rules that simplify the capital treatment of mortgage servicing assets, deferred tax assets arising from temporary differences that an institution could not realize through net operating loss carrybacks, and investments in the capital of unconsolidated financial institutions, as well as simplify the recognition and calculation of minority interests that are includable in regulatory capital, for non-advanced approaches banking organizations, including Truist and Truist Bank. Banking organizations may adopt these changes beginning on January 1, 2020, and must adopt these changes as of April 1, 2020. Truist has elected to implement these changes as of January 1, 2020 and anticipates an approximate 10 basis point reduction in CET1 and other risk-based capital ratios.

Revisions to Definition of Eligible Retained Income

The U.S. banking agencies have adopted an interim final rule altering the definition of eligible retained income in their respective capital rules. Under the new rule, eligible retained income is the greater of a firm's (i) net income for the four preceding calendar quarters, net of any distributions and associated tax effects not already reflected in net income, and (ii) average net income over the preceding four quarters. This definition applies with respect to all of Truist's capital requirements. The interim final rule became effective March 20, 2020.

Current Expected Credit Losses Methodology

The U.S. banking agencies have adopted an interim final rule that permits banking organizations that implement CECL before the end of 2020 to elect to follow the three-year transition available under the prior rule or a new five-year transition to phase in the effects of CECL on regulatory capital. Under the five-year transition, the banking organization would defer for two years 100% of the day-one effect of adopting CECL and 25% of the cumulative increase in the allowance for credit losses since adoption of CECL. Following the first two years, the electing organization will phase out the aggregate capital effects over the next three years consistent with the transition in the original three-year transition rule. The interim final rule became effective March 31, 2020. Truist has elected to use the five-year transition to phase in the impacts of CECL on regulatory capital.

Capital Adequacy Process

The maintenance of appropriate levels of capital is a top priority of management and is monitored on a regular basis. Truist's principal goals related to the maintenance of capital are to provide adequate capital to support Truist's risk profile consistent with its Board-approved risk appetite, provide financial flexibility to support future growth and client needs, comply with relevant laws, regulations, and supervisory guidance, achieve optimal credit ratings for Truist and its subsidiaries, and provide a competitive return to shareholders.

Enhanced Prudential Standards and Regulatory Tailoring Rules

Truist is subject to enhanced prudential standards and early remediation requirements whereby the Company must adhere to more stringent standards than those applicable to smaller institutions, including liquidity and capital requirements, leverage limits, stress testing, resolution planning, and risk management standards.

For example, on June 14, 2018, the FRB finalized rules that establish single-counterparty credit limits for banking organizations with greater than \$250 billion in total consolidated assets. Under the single-counterparty credit limit, Truist will be subject to a limit of 25% of Tier 1 capital for aggregate net credit exposures to any other unaffiliated counterparty. Truist will be subject to these enhanced prudential standards over a phase-in period.

In October 2019, the federal banking agencies adopted final rules for liquidity requirements that amend the LCR Rule such that bank holding companies with assets between \$250 billion and \$700 billion, and less than \$75 billion in certain other risk related exposures, (Category III institutions) would be subject to a reduced LCR requirement. Truist became a Category III institution effective January 1, 2020, after completing the merger of equals between BB&T and SunTrust on December 6, 2019. See Truist's Annual Report on Form 10-K for the year ended December 31, 2019 for a discussion of requirements for Category III banking organizations.

Capital Planning and Stress Testing Requirements

Truist regularly performs stress testing on its capital levels and is required to periodically submit the Company's capital plans and stress testing results to the banking regulators. Management regularly monitors the capital position of Truist on both a consolidated and bank-level basis. In this regard, management's overriding policy is to maintain capital at levels that are in excess of internal capital targets, which are above the regulatory "well capitalized" minimums. Management has implemented stressed capital ratio minimum targets to evaluate whether capital ratios calculated after the effect of alternative capital actions are likely to remain above minimums specified by the FRB for the annual CCAR process. Breaches of stressed minimum targets prompt a review of the planned capital actions included in Truist's capital plan.

Truist must submit an annual capital plan to the FRB that reflects its projected financial performance under baseline and stressful macroeconomic conditions, and Truist must obtain non-objection from the FRB for capital distributions proposed in its capital plan in connection with the FRB's annual CCAR process. Truist generally may pay dividends and interest on capital securities and repurchase or retire capital securities only in accordance with a capital plan that has been reviewed by the FRB and that has received a non-objection from the FRB.

The FRB's CCAR framework and the Dodd-Frank Act stress testing framework require large BHCs such as Truist to conduct company-run stress tests and subject them to supervisory stress tests conducted by the FRB. Among other things, the company-run stress tests employ stress scenarios provided by the FRB and incorporate the Dodd-Frank Act capital actions, which are intended to normalize capital distributions across large U.S. BHCs. In addition, Truist is required to conduct annual stress tests using internally-developed scenarios. The FRB also conducts CCAR and Dodd-Frank Act supervisory stress tests employing stress scenarios and internal supervisory models. The results of these stress tests are used to inform the FRB's objection or non-objection to those BHC's capital plans. As a Category III banking organization, Truist will be subject to supervisory stress testing on an annual basis and company-run stress testing on a biennial basis.

Truist was required to submit its capital plan and the results of its own stress tests to the FRB by April 6, 2020. The FRB will announce the results of its supervisory stress tests by June 30, 2020. The capital plan period starts July 1 of the current calendar year.

In addition to stress testing for Truist, the FDIC requires Truist Bank to conduct annual company-run stress tests.

Stress Capital Buffer Requirements

On March 4, 2020, the FRB issued a final rule to create a single capital requirement by integrating its annual capital planning and stress testing requirements with certain ongoing regulatory capital requirements. The rule, which applies to certain bank holding companies, including Truist, introduced a stress capital buffer and related changes to the capital planning and stress testing processes. Under the rule, beginning in the 2020 CCAR cycle, the stress capital buffer replaced the existing capital conservation buffer of 2.5%. The stress capital buffer equals the greater of (i) the maximum decline in Truist's CET1 capital ratio under the severely adverse scenario over the supervisory stress test measurement period, plus the sum of the ratios of the dollar amount of its planned common stock dividends to its projected risk-weighted assets for each of the fourth through seventh quarters of the supervisory stress test projection period, or (ii) 2.5%.

The rule makes related changes to capital planning and stress testing processes for BHCs subject to the stress buffer requirements. Specifically, the rule removes the 30% dividend payout ratio that has been used as a threshold for heightened supervisory scrutiny and assumes that BHCs maintain a constant level of assets and risk-weighted assets throughout the supervisory stress test projection period.

For additional information refer to "Item 1. Business" section and the "Capital" MD&A section in Truist's Annual Report on Form 10-K for the year ended December 31, 2019, and the "Capital" MD&A section in Truist's March 31, 2020 Form 10-Q.

Risk Management

Truist maintains a comprehensive risk management framework supported by people, processes and systems to identify, measure, monitor, manage and report significant risks arising from its exposures and business activities. Effective risk management involves appropriately balancing risk and return, operating in a safe and sound manner, and complying with applicable laws and regulations. The Company's risk management framework is designed to ensure that business strategies and objectives are executed in alignment with its risk appetite.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

Truist is committed to fostering a culture that supports transparency and escalation of risks across the organization. All teammates are responsible for upholding the Company's purpose, mission, and values, and are encouraged to speak up if there is any activity or behavior that is inconsistent with the Company's culture. The Truist code of ethics guides and unites the Company's decision making and informs teammates on how to act in the absence of specific guidance.

Capital, liquidity and resolution and recovery planning are overseen by various oversight committees. Regular reporting is provided to the Board of Directors and Executive Leadership on the assessments of risk, stress test results and governance of the models and tools used for these processes including CAP.

The Board of Directors meets regularly to provide oversight regarding the management, objectives and goals of the organization with regard to capital adequacy. Stress testing methodologies ensure the information provided captures forecasted losses for all material elements of the balance sheet and income statement. These results are provided for the baseline and stress scenarios, enabling the Board of Directors and risk committees to review expected performance against capital goals, targets, and risk appetite.

Refer to the "Risk Management" and "Capital" sections of the MD&A in Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended March 31, 2020 for more information regarding the Company's risk management framework and CAP.

Credit Risk

Credit risk is the risk to current or anticipated earnings or capital arising from the default, inability or unwillingness of a borrower, obligor, or counterparty to meet the terms of any financial obligation to Truist or otherwise perform as agreed. Credit risk exists in all activities where success depends on the performance of a borrower, obligor, or counterparty. Credit risk arises when Truist funds are extended, committed, invested, or otherwise exposed through actual or implied contractual agreements, whether on or off-balance sheet. Credit risk increases when the credit quality of an issuer whose securities or other instruments the bank holds deteriorates.

Truist has established the following general practices to manage credit risk:

- limiting the amount of credit that individual lenders may extend to a borrower;
- establishing a process for credit approval accountability;
- careful initial underwriting and analysis of borrower, transaction, market and collateral risks;
- ongoing servicing and monitoring of individual loans and lending relationships;
- continuous monitoring of the portfolio, market dynamics and the economy; and
- periodically reevaluating the Company's strategy and overall exposure as economic, market and other relevant conditions change.

Truist regularly monitors various segments of its credit portfolios to assess potential concentration risks. Management is actively involved in the credit approval and review process, and risk acceptance criteria are adjusted as needed to reflect the Company's risk appetite. Consistent with established risk management objectives, the Company utilizes various risk mitigation techniques, including collecting collateral and security interests, obtaining guarantees, and, to a limited extent, through the purchase of credit loss protection via third party insurance and/or use of credit derivatives such as CDS.

The Company categorizes its loan portfolio into three segments: commercial lending, consumer lending and credit card. The Company further disaggregates its commercial and consumer loans into various classes based on their underlying risk characteristics. In connection with the adoption of new accounting guidance in the first quarter of 2020, all loans previously in the PCI portfolio became PCD loans and were transferred to their respective portfolios.

In the commercial portfolio, risk concentrations are evaluated regularly on both an aggregate portfolio level and on an individual customer basis. The Company manages its commercial exposure through portfolio targets, limits and transactional risk acceptance criteria as well as other techniques, including but not limited to, loan syndications/participations, loan sales, collateral, structure, covenants, and other risk-reduction techniques. The accompanying disclosures are presented net of participations sold.

In the consumer portfolio, concentrations are evaluated based on purpose, geographic location, and risk characteristics such as credit rating, loan-to-value ratio, and term, with a focus on trends and concentrations at the portfolio level where potential risk concentrations can be remedied through changes in underwriting policies and portfolio guidelines.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

Additional disclosures related to the Company's credit exposures and credit risk policies are included in the Company's Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended March 31, 2020.

Maturities

The following tables provide the remaining maturity distribution by category for loans and leases and off balance sheet credit commitments, which includes unfunded commitments and letters of credit. The contractual amounts of off balance sheet credit commitments represent the maximum exposure to credit loss in the event of default by the borrower if the borrower were to fully draw against the commitment. The Company manages this credit risk using the same credit policies it applies to loans. Management assesses the borrower's credit worthiness to determine the necessary collateral, which may include marketable securities, receivables, inventory, equipment and real estate. For additional information, refer to the "Lending Activities" section of the MD&A in Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended March 31, 2020.

Table 5-1
Carrying Amount of Loans and Leases by Maturity and Exposure Type
March 31, 2020

(Dollars in millions)	One Year and Less	1 to 5 Years	After 5 Years	Total
Commercial:				
Commercial and industrial	\$ 24,497	\$ 88,022	\$ 36,642	\$ 149,161
CRE	3,568	14,569	9,395	27,532
Commercial construction	1,718	4,298	614	6,630
Lease financing	215	3,098	2,671	5,984
Retail:				
Residential mortgage	35	507	52,554	53,096
Residential home equity and direct	1,535	9,231	16,863	27,629
Indirect auto	331	13,139	11,676	25,146
Indirect other	162	4,268	6,550	10,980
Student (1)	—	—	7,771	7,771
Credit card	5,300	—	—	5,300
Total	\$ 37,361	\$ 137,132	\$ 144,736	\$ 319,229

- (1) Student loans are presented with loans with maturities of five years or more. The majority of student loan agreements held by the Company do not define maturity dates because the start of loan repayment depends on the types of deferment periods and grace periods offered.

There are no nonperforming credit card loans as they are charged-off rather than being reclassified as nonperforming and there are no impaired credit card loans without an ALLL.

AFS Investment Securities

Truist invests in securities allowable under bank regulations. These securities may include obligations of the U.S. Treasury, U.S. government agencies, GSEs (including MBS), bank eligible obligations of any state or political subdivision, non-agency MBS, structured notes, bank eligible corporate obligations (including corporate debentures), commercial paper, negotiable CDs, bankers acceptances, mutual funds and limited types of equity securities. The most important feature management relies on when assessing credit risk for U.S. Treasury securities and Agency MBS is the guarantee of the Federal government or its agencies.

U.S. Treasury, GSE and Agency MBS represented 98.9% of the total securities portfolio as of March 31, 2020.

Industry Disclosures

The following tables provide industry distribution by major types of commercial credit exposure. The credit exposure includes loans and contractual commitments to extend credit. Industry classification for commercial and industrial loans is based on the North American Industry Classification System. Commercial real estate loans are classified based on type of property. Consumer credit exposures and credit card exposures have been excluded from these tables.

Counterparty Credit Risk-Related Exposures

Counterparty credit risk is the risk that a counterparty to a transaction with the Company fails to perform. This risk is a byproduct of transactions undertaken by the Company to facilitate a client's financing and hedging needs and can also result from the Company's normal balance sheet management, risk management, and funding activities. Counterparty risk is a category of credit risk often associated with capital markets activities, including OTC derivatives and securities financing.

For further information on counterparty credit risk, refer to "Risk Management" in the MD&A, "Note 3. Securities Financing Activities," "Note 15. Derivative Financial Instruments" in the Truist's March 31, 2020 Form 10-Q, and "Note 1. Basis of Presentation". Truist's Annual Report on Form 10-K for the year ended December 31, 2019.

OTC derivatives

As a dealer and market maker, the Company uses OTC derivatives primarily to support client hedging and risk management activities, as well as in an end-user capacity to manage its own balance sheet risk exposures. As a financial entity, certain interest rate swaps and CDS transactions entered into by the Company or its subsidiaries are subject to mandatory clearing. At March 31, 2020, the Company had \$440 million in notional amount of purchased OTC credit derivatives related to management of its own balance sheet risk exposures. Additionally, the Company had \$3.3 billion of purchased notional and \$5.4 billion of sold notional OTC credit derivatives to support client hedging and risk management activities. Additional details of the Company's use of derivatives are included in the Company's March 31, 2020 Form 10-Q.

Counterparty credit risk management is integrated into the Company's credit risk management function. For transactions that generate meaningful counterparty credit risk, credit officers first perform a credit underwriting of the counterparty and assign an internal risk rating, before finally determining an aggregate credit exposure limit. Furthermore, if multiple underlying products and risk exposures are involved, then separate limits are assigned for each product with the counterparty. The counterparty exposure arising from OTC derivatives and securities lending transactions is aggregated with all other borrower exposures for risk management purposes.

In addition to counterparty selection and ongoing monitoring, documentation and collateral management are central to the Company's counterparty risk management efforts. Transactions are typically executed under master netting agreements. These documents provide a variety of legal protections, most notably the ability to close out all trades under that agreement on a net basis in the event of a counterparty default. The Company's legal department chairs a committee that reviews master netting agreements to confirm the enforceability of netting and collateral arrangements and generally obtains third party legal opinions regarding enforceability.

The regulatory requirement to centrally clear eligible derivative transactions with eligible CCPs has reduced the Company's counterparty credit exposure to dealers; however it has in turn increased its exposure to CCPs. The Company manages its exposure to CCPs using the same risk management practices as used for other counterparties and in accordance with supervisory guidance.

The values of OTC derivatives are based on the movement in one or more underlying variables (e.g., interest rates, credit spreads, foreign exchange rates, etc.). For internal risk management purposes, the Company establishes credit limits based on a measure of PFE, a statistical measure (at a high confidence interval) of the amount that a counterparty could owe the Company at some future point in time, taking into account collateral requirements and legally enforceable netting arrangements. The PFE, current credit exposure or mark-to-market, and collateral values, if applicable, are refreshed daily and used to calculate total counterparty credit exposure, which is compared against pre-established limits. The Company has an established limit exception management process in place which identifies, escalates, remediates, and documents any risk exposures that may exceed limits. As a bank subject to the standardized approach, RWA for OTC derivatives is determined using the methodology prescribed in the Rule for calculating PFE, and as such, the Company does not use its internal model generated PFE for that purpose.

The Company typically establishes zero threshold margin arrangements with dealers, governed under ISDA/CSA documents, such that when the fair value of a derivative changes, the out-of-the-money counterparty posts collateral to the in-the-money counterparty; collateral is generally exchanged on a daily basis. OTC derivative transactions with non-dealer clients are generally not subject to the same margin arrangements; however, they are still subject to master netting arrangements and the Company uses other available risk management techniques when necessary.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

For OTC derivative transactions subject to a CSA, the Company typically only accepts high quality, liquid collateral instruments such as cash, U.S. Treasury, or agency-issued instruments, subject to applicable haircuts, as necessary. This collateral generally qualifies as financial collateral pursuant to the Rule. Cash represents the majority of the Company's collateral positions and is typically held in the Company's account or at another financial institution. Securities collateral is held at the Company's custodian bank in the Company's name and is generally controlled by the Company. In limited circumstances collateral may be posted to an independent custodian bank for the benefit of the Company; in these circumstances, the Company does not have direct control over the collateral.

All OTC derivative transactions subject to margining requirements are monitored daily by an independent control function to ensure that collateral calls are issued and met in a timely manner. This function also ensures that any excess collateral posted by the Company to a counterparty is actively managed and withdrawn when no longer required. All collateral is valued daily. The collateral control function follows established procedures to resolve any disputes on the amount of collateral required, and escalation procedures are in place to ensure senior management is informed of any material disputes on a timely basis. In a limited number of situations, the Company's CSAs contain ratings based thresholds, such that the Company would need to post additional collateral to the degree that it suffered a credit downgrade.

Derivative instruments are priced using observable market inputs at a mid-market valuation point and take into consideration appropriate valuation adjustments for collateral, market liquidity, and counterparty credit risk. For purposes of determining fair value adjustments to its derivative positions, the Company takes into consideration the credit profile and likelihood of default by counterparties and itself, as well as, its net exposure, which considers legally enforceable master netting agreements and financial collateral along with remaining maturities. The expected loss of each counterparty, the CVA, is estimated using market-based views of counterparty default probabilities observed in the single-name CDS market, when available and of sufficient liquidity. When single-name CDS market data is not available or not of sufficient liquidity, the probability of default is estimated using a combination of the Company's internal risk rating system and sector/rating based CDS data.

For purposes of estimating the Company's own credit risk on derivative liability positions, the DVA, the Company uses probabilities of default from observable, sector/rating based CDS data. Information on the Company's fair value measurements can be found in the Company's March 31, 2020 Form 10-Q in "Note 14. Fair Value Disclosures."

Securities financing

The securities financing market encompasses both repurchase and reverse repurchase agreements, as well as securities lending/borrowing transactions. These transactions are structured such that borrowers post collateral in exchange for the ability to borrow cash or securities. Securities financing transactions enable cost-effective borrowing for clients and the Company and facilitate a variety of market making activities. Truist's securities financing transactions are subject to the same risk management procedures, and applicable RWA calculations consider eligible collateral and / or the counterparty to the underlying transaction.

Securities financing transactions are typically secured by high-quality, liquid collateral. The Company establishes limits on counterparties using the Basel Collateral Haircut methodology, measuring in this case the amount that the Company could lose if it were forced to close out the transaction ahead of scheduled maturity in a stressed situation. The Company may supplement its credit limits with notional limits based on the counterparty and/or the size of the financing arrangement.

Securities financing transactions provide for the regular movement of collateral so that the lender maintains an appropriate margin. The Company monitors its securities financing positions on a daily basis and calls for additional collateral as needed. The collateral received is typically held in an account with the Company's securities custodian.

Credit Risk Mitigation

The Rule allows eligible financial collateral, guarantees, and credit derivatives to be recognized in the calculation of RWA. The Company's use of credit risk mitigants in the calculation of RWA includes eligible collateral primarily in the form of U.S. Treasury or agency securities as well as cash. When financial collateral is obtained that qualifies as eligible collateral under the Rule, the eligible collateral can be substituted for the collateralized portion of the credit exposure in the RWA calculation. Similarly, when an eligible guarantee is received, the risk weight applicable to the eligible guarantor would apply to the exposure amount covered by the guarantee.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation

Amounts subject to master netting arrangements	(1,371)	—	(1,371)
Collateral held	(1,442)	—	(1,442)
Net exposure for derivatives covered by eligible collateral	4,459	1,781	6,240

Truist has certain loans and other assets, totaling approximately \$10.3 billion, which have guarantees by the U.S. government.

Securitizations

Overview

The Basel III framework for securitizations addresses the capital treatment for exposures that involve the tranching of credit risk and categorizes securitizations as either traditional or synthetic.

The Rule describes securitization transactions as:

- All or a portion of the credit risk of one or more underlying exposures is transferred to one or more third parties other than through the use of credit derivatives or guarantees;
- The credit risk associated with the underlying exposures has been separated into at least two tranches reflecting different levels of seniority;
- Performance of the securitization exposures is solely dependent on the performance of the underlying exposures; and
- All or substantially all of the underlying exposures are financial exposures.

A synthetic securitization shares the same attributes as a traditional securitization, except that all or a portion of the credit risk of one or more underlying assets is retained or transferred to one or more third parties through the use of one or more credit derivatives or guarantees.

Any securitization where one or more of the underlying exposures are a securitization exposure is considered to be a resecuritization.

Securitization process

The Company's current exposure to securitizations includes primarily loans to SPEs (not sponsored by the Company) that are designed to meet client needs for long-term financing of assets or working capital. These securitization arrangements assist the Company's clients in funding their financial assets. The Company also has an AFS investment in a Re-Remic trust that primarily holds non-agency MBS and is considered a resecuritization for purposes of the risk-based capital rules. Exposure amounts at March 31, 2020 are provided below in Tables 8-1 and 8-2.

The Company also originates and sells certain commercial mortgage loans to Fannie Mae and Freddie Mac, originates FHA insured loans, and issues and sells Ginnie Mae commercial MBS backed by FHA insured loans. The Company transfers commercial loans to securitization entities sponsored by these agencies. The loans are exchanged for cash or securities that are readily redeemable for cash, with servicing rights retained. The Company has made certain representations and warranties with respect to the transfer of these loans and has entered into a loss share guarantee related to certain loans transferred to Fannie Mae.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation
March 31, 2020

At March 31, 2020, the Company held \$27 million in insured loans that it intended to securitize with Ginnie Mae. The Company periodically evaluates securitizations as a source of alternate financing; however, it does not expect securitization to comprise a significant amount of total funding.

Due diligence

The Company analyzes the credit profile of each securitization exposure prior to entering into that position, and documents such due diligence within the timeframe required under the Rule. The due diligence procedures are designed to provide the Company with a comprehensive understanding of the features that would materially affect the performance of its exposures.

The Company's due diligence procedures include analyzing and monitoring:

- Information regarding the performance of the underlying credit exposures and relevant market data;
- Structural and other enhancement features that may affect the credit quality of a securitization; and
- Credit profile of the seller/servicer of the assets securitized.

The level of detail included in the due diligence procedures is commensurate with the complexity of each securitization position held. In addition to pre-trade due diligence, the due diligence procedures are also performed on a periodic basis for each securitization position.

Risks

Securitization transactions involve a number of risks including credit risk and seller/servicer risk. Credit risk arises where the underlying assets fail to perform (e.g., payment rates, dilution, write-offs/losses), such that the credit enhancement is insufficient to protect the Company's investment. Seller/servicer risk represents the reliance on the seller and/or servicer of the assets to perform its duties under the securitization agreement and make certain representations and warranties as to the underlying collateral. The risks in the securitization loan portfolio are monitored monthly by comparing performance of assets to the structural requirements. The Company manages these risks (both pre and post commencement of a position) as part of its comprehensive risk management framework, which is described in the Company's March 31, 2020 Form 10-Q.

Risk-based capital approach

The Basel III standardized approach requires the application of the SSFA or, if not subject to the Market Risk Rule, the gross-up approach for calculating RWA for securitization exposures. The Company is subject to the Market Risk Rule and, therefore, applies the SSFA to its securitization exposures. A risk weight of 1,250% must be applied to a securitization exposure where the Company does not apply the SSFA.

The SSFA requires the following inputs to calculate regulatory capital:

- *Attachment Point*: the point at which collateral losses from underlying assets backing a securitization tranche will first be applied to the tranche in the form of principal write-downs;
- *Detachment Point*: the point at which the tranche will be completely written-down as a result of losses from the collateral backing the tranche;
- *Weighted Average Capital*: the weighted average capital charge for the assets in the securitization;
- *Seriously Delinquent*: the percentage of underlying collateral that is seriously delinquent (e.g., 90+ days past due, in foreclosure, in bankruptcy); and
- *Calibration Parameter*: a parameter that increases the riskiness of a tranche for re-securitizations.

The risk-based capital requirement under the SSFA is the exposure amount (including any accrued interest receivable on the exposure) multiplied by the higher of either the calculated risk weight, determined by the inputs listed above, or a 20% risk weight.

Risk-weighted assets

The following table presents securitization exposures and their applicable risk weighting as of March 31, 2020. The amount of exposures that were past due and impaired on March 31, 2020 were immaterial, and no losses were incurred on the exposures during the year ended March 31, 2020.

Equity Securities Not Subject to Market Risk Rule

The Company holds equity securities for various purposes. The Company's investments in private equity funds are generally held to realize a potential profit; equity securities in pension plans are held to reduce future pension expense; investments in affordable housing are made to generate tax credits and investments in certain trade organizations are required to realize the benefits of being a member.

The Company has total equity exposures of approximately \$15.0 billion, with \$6.2 billion in individual equities and \$8.9 billion in equity funds at March 31, 2020. The majority of the individual investments are related to the Company's CRA activities, including tax-advantaged investments. The Company uses the simple risk-weight approach for its individual equity securities. The equity funds consist of BOLI, private equity, pension fund assets, money market and other equity funds. The Company uses the full look-through approach for BOLI assets in separate accounts. Investment guidelines specify objectives and constraints for separate account BOLI investment funds, including permitted and non-permitted investments, concentration and diversification requirements, credit quality requirements and duration parameters. There were no unrealized gains not recognized through earnings included in Tier 2 capital for the year ended March 31, 2020.

Non-marketable equity securities are generally recorded either at historical cost or using the equity method. Refer to "Note 1. Basis of Presentation" in Truist's Annual Report on Form 10-K for the year ended December 31, 2019 for accounting policies related to equity investments and the valuation of financial instruments.

At March 31, 2020, the Company held approximately \$595 million of exposures in equity funds that relate to the Company's nonqualified defined contribution plan. Because there is an offsetting liability for these investments, there is no impact to earnings or equity from these investments as changes in the fair value of the investments are recorded in income with an offsetting change in personnel expense.

Pillar 3 Regulatory Capital DisclosuresTruist Financial Corporation
March 31, 2020

Equity securities carried at cost and the related unrealized gains and losses were immaterial at March 31, 2020.

The following table summarizes the Company's equity securities not subject to the Market Risk Rule:

Table 9-1
Equity Securities Not Subject to Market Risk Rule
March 31, 2020

(dollars in millions)	Exposure	RWA	Capital Impact of RWA (1)
20% risk weight	\$ 1,415	\$ 283	\$ 23
100% risk weight	5,097	5,097	408
Full look-through approach	8,518	8,122	650
Total	<u>\$ 15,030</u>	<u>\$ 13,502</u>	<u>\$ 1,081</u>
Public	\$ 5,703		
Nonpublic	9,327		
Total	<u>\$ 15,030</u>		

(1) Calculated by multiplying RWA by the minimum total risk-based capital ratio of 8%.

(k) Aggregate amount of resecuritization exposures retained or purchased categorized according to: (1) Exposures to which credit risk mitigation is applied and those not applied; and (2) Exposures to guarantors categorized according to guarantor creditworthiness categories or guarantor name.	Form 10-K: Note 1. Basis of Presentation. Note 18. Fair Value Disclosures Item 7 - MD&A - Risk Management Form 10-Q: Note 7. Loan Servicing
Table 9 - Equities Not Subject to Subpart F of This Part	
Qualitative:	
(a) The general qualitative disclosure requirement with respect to equity risk for equities not subject to subpart F of this part, including: (1) Differentiation between holdings on which capital gains are expected and those taken under other objectives including for relationship and strategic reasons; and (2) Discussion of important policies covering the valuation of and accounting for equity holdings not subject to subpart F of this part. This includes the accounting techniques and valuation methodologies used, including key assumptions and practices affecting valuation as well as significant changes in these practices.	Pillar 3 Regulatory Capital Disclosures: Equity Securities Not Subject to Market Risk Rule Form 10-K: Note 1. Basis of Presentation Note 18. Fair Value Disclosures Item 7 - MD&A - Risk Management
Quantitative:	
(b) Value disclosed on the balance sheet of investments, as well as the fair value of those investments; for securities that are publicly traded, a comparison to publicly-quoted share values where the share price is materially different from fair value.	Pillar 3 Regulatory Capital Disclosures: Table 9-1 The values on the balance sheet are not materially different than the fair values of the investments. Publicly-quoted share values are not materially different from their fair values.
(c) The types and nature of investments, including the amount that is: (1) Publicly traded; and (2) Non publicly traded.	Pillar 3 Regulatory Capital Disclosures: Table 9-1
(d) The cumulative realized gains (losses) arising from sales and liquidations in the reporting period.	Form 10-Q: Note 14. Fair Value Disclosures
(e) (1) Total unrealized gains (losses). (2) Total latent revaluation gains (losses). (3) Any amounts of the above included in tier 1 or tier 2 capital.	Pillar 3 Regulatory Capital Disclosures: Equity Securities Not Subject to Market Risk Rule

Disclosure Requirement	Disclosure Location
(f) Capital requirements categorized by appropriate equity groupings, consistent with the FDIC-supervised institution's methodology, as well as the aggregate amounts and the type of equity investments subject to any supervisory transition regarding regulatory capital requirements.	Pillar 3 Regulatory Capital Disclosures: Table 9-1
Table 10 - Interest Rate Risk For Non-Trading Activities	
Qualitative:	
(a) The general qualitative disclosure requirement, including the nature of interest rate risk for non-trading activities and key assumptions, including assumptions regarding loan prepayments and behavior of non-maturity deposits, and frequency of measurement of interest rate risk for non-trading activities.	Form 10-K: Item 7 - MD&A - Interest Rate Market Risk (Other than Trading) Item 7 - MD&A - Risk Management Form 10-Q: Item 2 - MD&A - Interest Rate Market Risk (Other than Trading)
Quantitative:	
(b) The increase (decline) in earnings or economic value (or relevant measure used by management) for upward and downward rate shocks according to management's method for measuring interest rate risk for non-trading activities, categorized by currency (as appropriate).	Form 10-Q: Item 2 - MD&A - Table 19 Item 2 - MD&A - Table 20

Forward-Looking Statements

This document contains "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995, regarding the financial condition, results of operations, business plans and the future performance of Truist. Words such as "anticipates," "believes," "estimates," "expects," "forecasts," "intends," "plans," "projects," "may," "will," "should," "would," "could" and other similar expressions are intended to identify these forward-looking statements.

Forward-looking statements are not based on historical facts but instead represent management's expectations and assumptions regarding Truist's business, the economy and other future conditions. Such statements involve inherent uncertainties, risks and changes in circumstances that are difficult to predict. As such, Truist's actual results may differ materially from those contemplated by forward-looking statements. While there can be no assurance that any list of risks and uncertainties or risk factors is complete, important factors that could cause actual results to differ materially from those contemplated by forward-looking statements include the following, without limitation, as well as the risks and uncertainties more fully discussed under Part II, Item 1A-Risk Factors in Truist's Form 10-Q for the quarter ended March 31, 2020 and in Truist's Form 10-K for the year ended December 31, 2019:

- the COVID-19 pandemic has disrupted the global economy, and continuation of current conditions could adversely affect Truist's capital and liquidity position, impair the ability of borrowers to repay outstanding loans and increase Truist's allowance for credit losses, impair the collateral values, cause an outflow of deposits, result in lost revenue or additional expenses, result in goodwill impairment charges, the impairment of other financial and nonfinancial assets, and increase Truist's cost of capital;
- risks and uncertainties relating to the Merger, including the ability to successfully integrate the companies or to realize the anticipated benefits of the Merger;
- expenses relating to the Merger and integration of heritage BB&T and heritage SunTrust;
- deposit attrition, client loss or revenue loss following completed mergers or acquisitions may be greater than anticipated;
- changes in the interest rate environment, including the replacement of LIBOR as an interest rate benchmark, which could adversely affect Truist's revenue and expenses, the value of assets and obligations, and the availability and cost of capital, cash flows, and liquidity;
- volatility in mortgage production and servicing revenues, and changes in carrying values of Truist's servicing assets and mortgages held for sale due to changes in interest rates;
- management's ability to effectively manage credit risk;
- inability to access short-term funding or liquidity;
- loss of client deposits, which could increase Truist's funding costs;
- changes in Truist's credit ratings, which could increase the cost of funding or limit access to capital markets;
- additional capital and liquidity requirements that will result from the Merger;
- regulatory matters, litigation or other legal actions, which may result in, among other things, costs, fines, penalties, restrictions on Truist's business activities, reputational harm, or other adverse consequences;
- risks related to originating and selling mortgages, including repurchase and indemnity demands from purchasers related to representations and warranties on loans sold, which could result in an increase in the amount of losses for loan repurchases;
- failure to execute on strategic or operational plans, including the ability to successfully complete and/or integrate mergers and acquisitions;
- risks relating to Truist's role as a servicer of loans, including an increase in the scope or costs of the services Truist is required to perform without any corresponding increase in Truist's servicing fee, or a breach of Truist's obligations as servicer;
- negative public opinion, which could damage Truist's reputation;
- increased scrutiny regarding Truist's consumer sales practices, training practices, incentive compensation design and governance;
- competition from new or existing competitors, including increased competition from products and services offered by non-bank financial technology companies, may reduce Truist's client base, cause Truist to lower prices for its products and services in order to maintain market share or otherwise adversely impact Truist's businesses or results of operations;
- Truist's ability to introduce new products and services in response to industry trends or developments in technology that achieve market acceptance and regulatory approval;
- Truist's success depends on the expertise of key personnel, and if these individuals leave or change their roles without effective replacements Truist's operations and integration activities could be adversely impacted. This could be exacerbated as Truist continues to integrate the management teams of heritage BB&T and heritage SunTrust, or if the organization is unable to hire and retain qualified personnel;
- legislative, regulatory or accounting changes may adversely affect the businesses in which Truist is engaged;
- evolving regulatory standards, including with respect to capital and liquidity requirements, and results of regulatory examinations, may adversely affect Truist's financial condition and results of operations;
- accounting policies and processes require management to make estimates about matters that are uncertain;
- general economic or business conditions, either nationally or regionally, may be less favorable than expected, resulting in, among other things, slower deposit or asset growth, a deterioration in credit quality or a reduced demand for credit, insurance or other services;
- risk management measures and management oversight functions may not identify or address risks adequately;
- unfavorable resolution of legal proceedings or other claims or regulatory or other governmental investigations or inquiries could result in negative publicity, protests, fines, penalties, restrictions on Truist's operations or ability to expand its business or other negative consequences, all of which could cause reputational damage and adversely impact Truist's financial condition and results of operations;
- competitors of Truist may have greater financial resources or develop products that enable them to compete more successfully than Truist and may be subject to different regulatory standards than Truist;
- failure to maintain or enhance Truist's competitive position with respect to technology, whether it fails to anticipate client expectations or because its technological developments fail to perform as desired or are not rolled out in a timely manner or for other reasons, may cause Truist to lose market share or incur additional expense;
- fraud or misconduct by internal or external parties, which Truist may not be able to prevent, detect or mitigate;
- operational or communications systems, including systems used by vendors or other external parties, may fail or may be the subject of a breach or cyber-attack that, if successful, could adversely impact Truist's financial condition and results of operations;
- security risks, including denial of service attacks, hacking, social engineering attacks targeting Truist's employees and clients, malware intrusion or data corruption attempts, and identity theft could result in the disclosure of confidential information, adversely affect Truist's business or reputation or create significant legal or financial exposure;
- natural or other disasters, including acts of terrorism and pandemics, could have an adverse effect on Truist, including a material disruption of Truist's operations or the ability or willingness of clients to access Truist's products and services;
- widespread system outages, caused by the failure of critical internal systems or critical services provided by third parties could adversely impact Truist's financial condition and results of operations; and
- depressed market values for Truist's stock and adverse economic conditions sustained over a period of time may require a write down to goodwill.
