

# IDEAYA Biosciences – Fact Sheet

**Founded 2015** on the investment thesis that Synthetic Lethality would emerge as a central focus of precision medicine oncology, with significant Pharma interest and the potential to develop *first-in-class* therapeutics for biomarker-defined cancer patient populations.

**Broad Pipeline** of clinical and preclinical precision medicine oncology programs with defined patient biomarkers, including

- *MAT2A* for patients having tumors with MTAP deletion, a population estimated to represent ~ 15% of all solid tumors,
- *Pol Theta* for patients with tumors having mutations in BRCA or other homologous recombination deficiency,
- *PARG* for patients having tumors with BRCA2 mutations or other genetic and/or molecular signatures,
- *Werner Helicase* for patients having tumors with high microsatellite instability,
- DNA Damage Targets (DDT1, DDT2), undisclosed synthetic lethality targets for molecularly-defined patient populations, and
- *IDE196* for patients having metastatic uveal melanoma (MUM) and other solid tumors harboring GNAQ or GNA11 mutations, such as skin melanoma.

**Proven Management Team** with deep business and scientific experience has built leading oncology biotech companies, led by CEO Yujiro S. Hata, M.B.A., an entrepreneur with over 20 years of experience building companies that have delivered innovative therapies to patients.

**Scientific Advisory Board** includes world-class scientists who are key opinion leaders in precision medicine oncology and synthetic lethality, including Alan D'Andrea, M.D. (Harvard, Dana Farber), Bill Sellers, M.D. (Broad Institute, Novartis), and Frank McCormick, Ph.D. (UCSF).

**Pharma Strategic Partnerships and Collaborations** with GlaxoSmithKline<sup>1</sup> and Pfizer<sup>2</sup>. The GSK strategic partnership validates IDEAYA's Synthetic Lethality platform and enhances the companies' collective leadership in Synthetic Lethality. IDEAYA and GSK are collaborating on three programs – *MAT2A*, *Pol Theta* and *Werner Helicase*. IDEAYA retains commercial rights of 50% US profit-share and ex-US royalties for *MAT2A* and *Werner Helicase*, and worldwide royalties for *Pol Theta*, with potential to earn up to approximately \$3 billion in aggregate cash milestones across the three programs.

**Strong Balance Sheet** of ~\$325 million<sup>3</sup> with capital efficient model is anticipated to fund planned operations into 2024, supporting clinical data milestones across multiple programs, including Phase 1 interim data for clinical development candidate *IDE397* targeting *MAT2A* and potential GSK option exercise (+\$50 million), and Phase 1 interim data for clinical development candidate *IDE196* targeting PKC, including in MUM and in GNAQ/11-mutation skin melanoma.

**Analyst Coverage** by JP Morgan, Citi, Guggenheim, Jefferies, Oppenheimer, Northland, Roth, HC Wainwright and Wedbush.

(1) GSK Collaboration, Option and License Agreement; (2) Pfizer Clinical Trial Collaboration and Supply Agreement; (3) ~\$325 million includes \$283.6 million cash, equivalents and marketable securities as of December 31, 2020 plus subsequent \$43.3 million gross proceeds raised through ATM facility January 2021 through March 22, 2021 pursuant to IDEAYA Form 10K and Q4 2021 Financials (March 2021)
