Forward-looking statements

This presentation contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, which are subject to risks and uncertainties, including risks related to competitive factors, difficulties and delays inherent in the development, manufacturing, marketing and sale of medical products, government regulation and general economic conditions and other risks and uncertainties described in the company's periodic reports on file with the U.S. Securities and Exchange Commission including the most recent Annual Report on Form 10-K of the company, as filed with the U.S. Securities and Exchange Commission. Actual results may differ materially from anticipated results. Medtronic does not undertake to update its forward-looking statements or any of the information contained in this presentation, including to reflect future events or circumstances.

Agenda

- Introductory remarks
- Key highlights
- Strategic focus on 'Smart Dosing' market
- Early U.S. success with MiniMed™ 780G system
- Meal Detection™ technology
- Product pipeline
- Closing comments
- Q&A

Geoff Martha
Chairman & CEO

Que Dallara
EVP & President,
Diabetes

Ali Dianaty
SVP, Product Innovation
& Operations, Diabetes

Ryan Weispfenning
VP, Head of Investor
Relations

Accelerating Momentum in Diabetes Business

High Growth

Turnaround

Key Messages

- CGM alone is not enough. Over the next decade, the standard of care will shift to high-growth Smart Dosing market for T1/T2 Insulin Intensive patients
- MiniMed™ 780 system with Guardian™ 4 sensor delivers both outcomes and quality of life. We are winning new patients in our early phase of the U.S. launch
- Meal Detection™ technology mimics a human pancreas with a unique, responsive algorithm every 5 minutes
- “Razor/razor blade” model allows Medtronic to grow both installed base and use of CGM and consumables, which represent ~80% of our Diabetes revenue
- Medtronic Diabetes is redesigning its entire portfolio of hardware and software as part of our innovation-driven growth strategy; will be accretive to Medtronic’s WAMGR*

CGM Alone is Not Enough

Despite CGM penetration of ~70%, **less than 30% of patients** achieve the optimal A1c target¹

>90% of MiniMed™ 780G users achieve/exceed target^{5*}

Using optimal settings of 100 mg/dL (5.5 mmol/L) target and AIT of 2 hours

“For the last 5 days that I have had this new SmartGuard™ feature activated... everything has changed... **for the first time in my 21 years of diabetes, I don't feel like a diabetic.**”

- Unsolicited Customer Email, June 12th

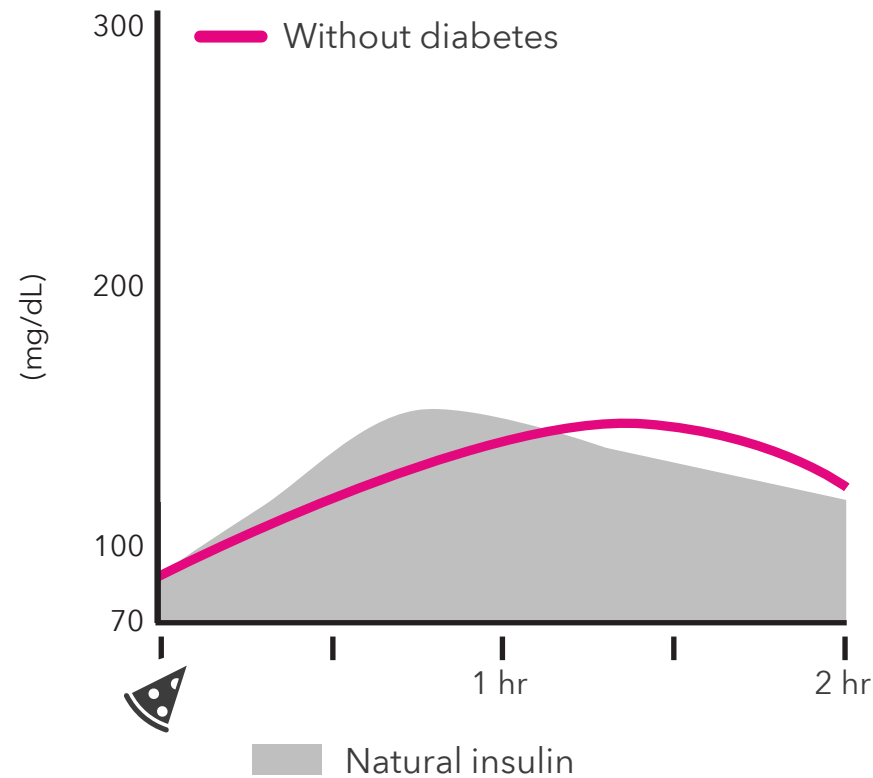

“It's allowing me to **transition thru (sic) daily activities and routines making fewer decisions – effortless time in range.** I've been able to tuck my pump away, disconnect from my phone, and still being able to see my numbers and trends via my smartwatch!”

- Kris, MiniMed™ 780G User

Other AID Systems Mimic Manual MDI

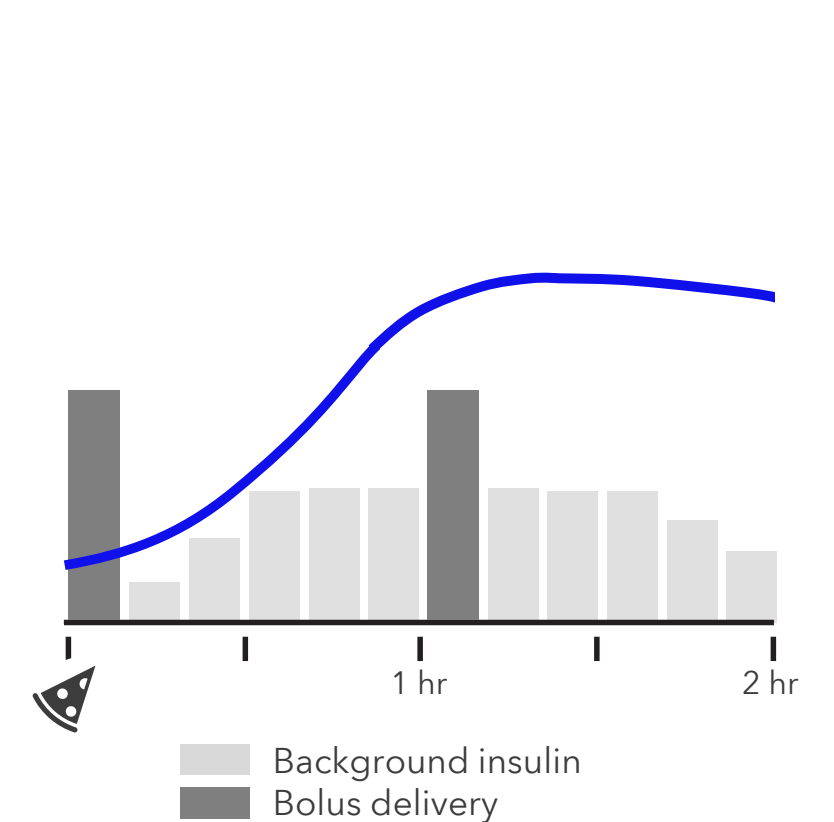

A **healthy pancreas** provides continuous insulin

MDI & some AID are limited to discrete bolus delivery

Other AID can only deliver corrections once every 60 min

MiniMed™ 780G System Mimics a Healthy Pancreas

Medtronic's competitive advantage in data and algorithms has built in safety features that enables faster and more precise insulin delivery to get back to target

Checks every correction bolus to see if can potentially lead to hypoglycemia (2 hr forecast)

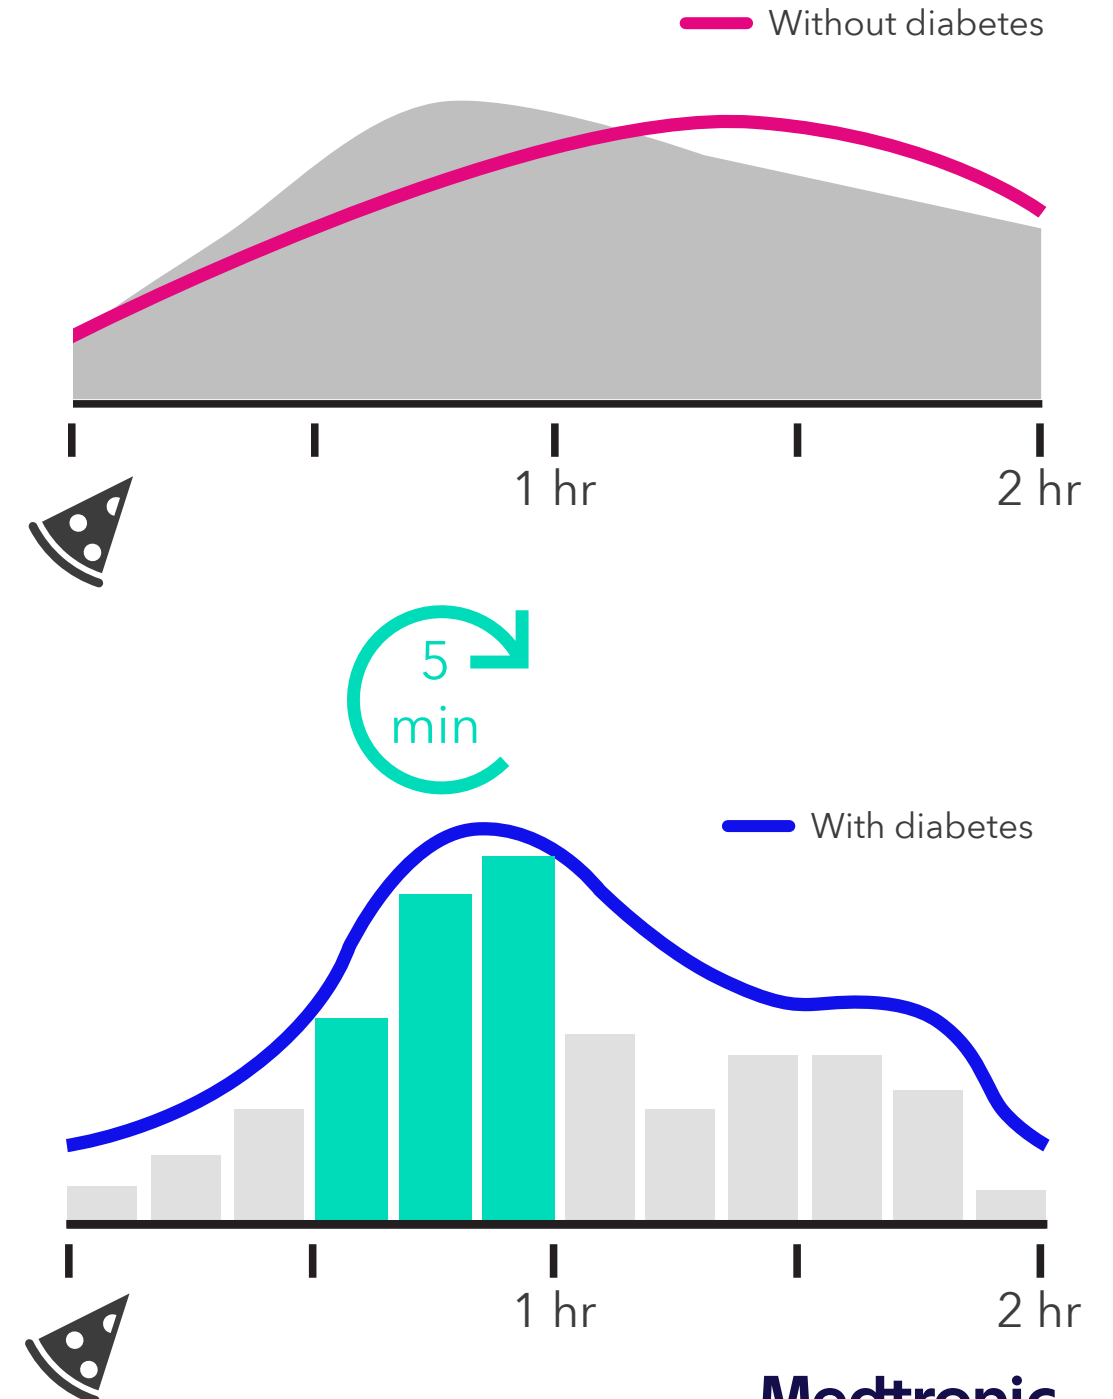

Uses a prediction model to predict glucose trends that may result from a correction bolus (4 hr forecast)

If hypoglycemia is predicted, then correction bolus is reduced

A **healthy pancreas** provides continuous insulin in response to rising glucose

Meal Detection™ technology* automatically adjusts and corrects† **every five minutes‡**

*Taking a bolus 15 - 20 min before a meal helps to keep blood sugar levels under control after eating.

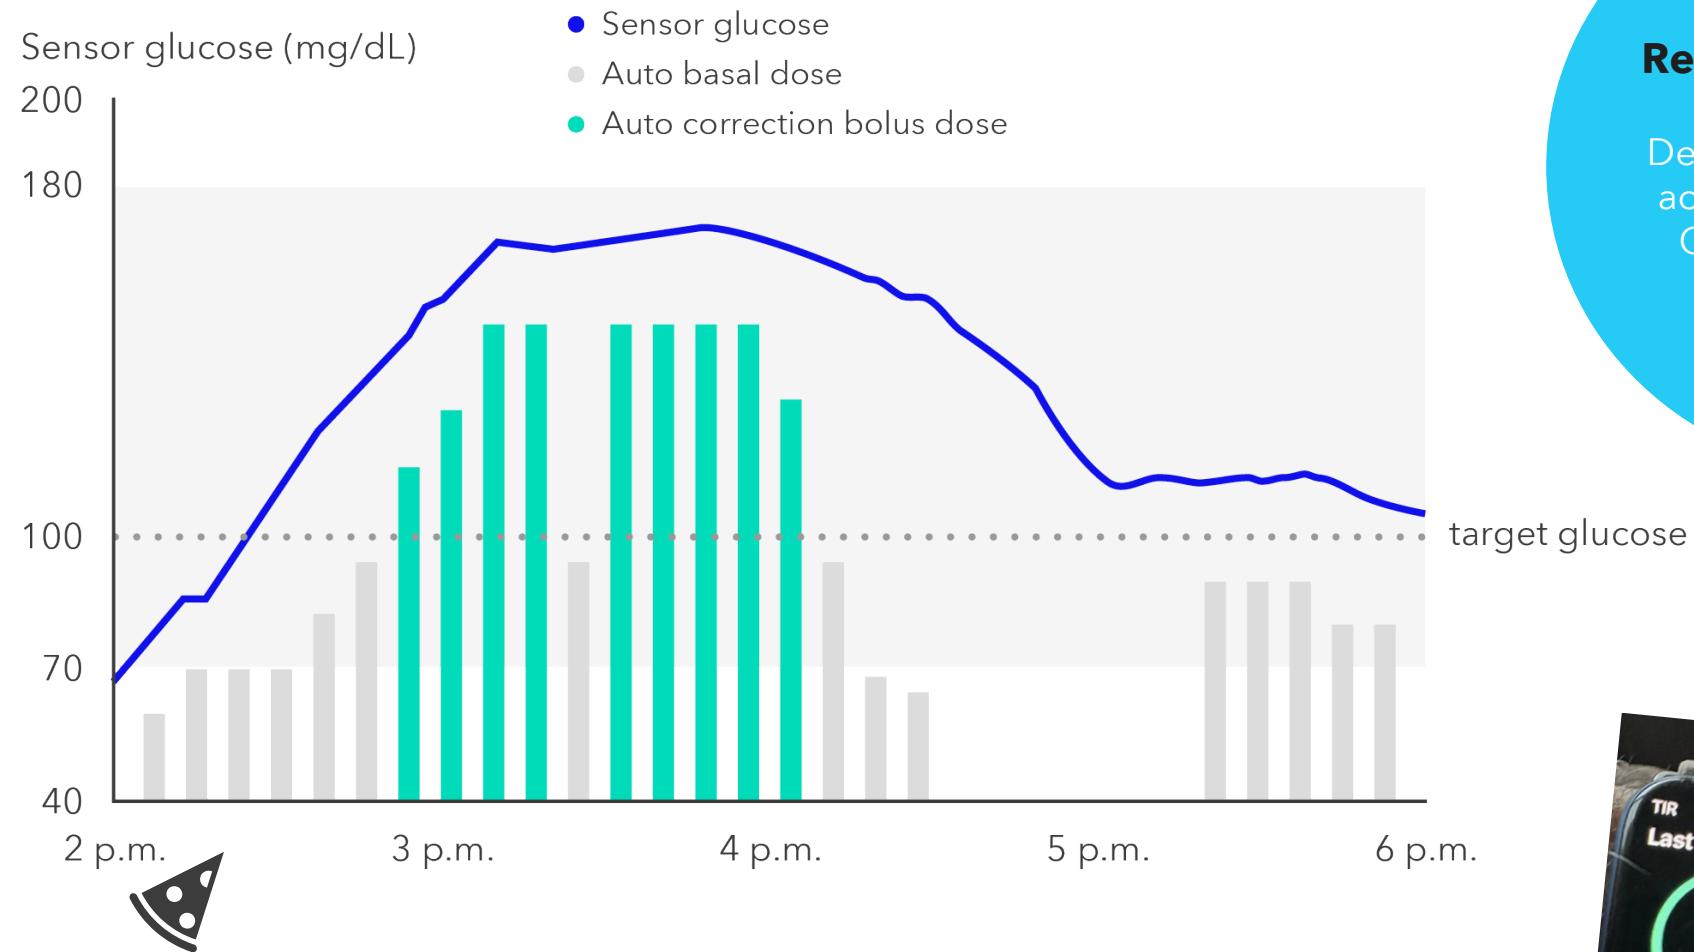

† Refers to auto correct, which provides bolus assistance. Can deliver all correction doses automatically without user interaction, feature can be turned on and off.

‡ Refers to SmartGuard™ technology. Individual results may vary.

Customers Are Excited About Meal Detection™ Technology

Bill
MiniMed™ 780G System
Customer

World's Most Responsive Algorithm
Teal bars show Meal Detection™ technology in action (auto-corrections). Gray shows auto-basal doses.

"One of the biggest things is the every 5-minute auto-corrections. Here's an example. I missed taking a bolus when I had a snack this afternoon. As you can see from the teal lines, auto-correction kicked in. Love seeing my results at a glance on my Apple Watch."

Pipeline is Differentiated for Patient Preference

**Simplera CGM
+ InPen**

Smart MDI

- ✓ No fingersticks
- ✓ No over-tape
- ✓ Fully disposable
- ✓ Simple insertion
- ✓ 50% smaller than G4S

*Under active review
(FDA/CE Mark)*

**MiniMed™ 780G AHCL
+ Simplera CGM**

Tethered AID

- ✓ AHCL Algorithm with SmartGuard™
- ✓ 7-day extended wear infusion set
- ✓ Labeling expansions

*Active IDE**

**8-Series Pump AHCL +
Next Gen CGM**

Tethered AID

- ✓ AHCL Algorithm with SmartGuard™
- ✓ 7-day extended wear infusion set
- ✓ Smartphone control

*In Development**

**Patch Pump + Next
Gen CGM**

Patch AID

- ✓ AHCL Algorithm with SmartGuard™
- ✓ Fully disposable
- ✓ Demonstrated, high-volume manufacturing

*Pending Close**

* Pending associated regulatory approvals, product images not to exact scale

How Diabetes Adds Value to Medtronic

Faster Growth

- ✓ One of the fastest growing sectors in medtech
- ✓ Accelerating growth in FY24, ramping to above Medtronic average in FY25 and targeting long-term DD growth

Durable Business Model

- ✓ AID and Smart MDI help retain customers
- ✓ Recurring revenue business model ("razor/razor blade" on CGM and consumables)
- ✓ Broad geographic footprint

Meaningful Contribution

- ✓ WAMGR accretive to Medtronic long-term
- ✓ Catalyst for connected products and consumer experience
