## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

### Glossary of Defined Terms

Term	Definition
ABS	Asset-backed securities
ACL	Allowance for credit losses
AFS	Available-for-sale
Agency MBS	Mortgage-backed securities issued by a U.S. government agency or GSE
ALLL	Allowance for loan and lease losses
AOCI	Accumulated other comprehensive income (loss)
BOLI	Bank-owned life insurance
Basel III Rules	Rules issued by the FRB, OCC and FDIC on capital adequacy and liquidity requirements in the U.S for banking organizations.
BB&T	BB&T Corporation and subsidiaries (changed to "Truist Financial Corporation" effective with the Merger)
BCBS	Basel Committee on Banking Supervision
BHC	Bank holding company
BHCA	Bank Holding Company Act of 1956, as amended
Branch Bank	Branch Banking and Trust Company (changed to "Truist Bank" effective with the Merger)
CAP	Capital Adequacy Process
CARES Act	The Coronavirus Aid, Relief, and Economic Security Act
CCAR	Comprehensive Capital Analysis and Review
CCP	Central clearing party
CD	Certificate of deposit
CDO	Collateralized debt obligation
CDS	Credit default swaps
CECL	Current expected credit loss
CEIO	Credit-enhancing interest-only strip
CET1	Common equity tier 1
CFPB	Consumer Financial Protection Bureau
CFTC	Commodity Futures Trading Commission
CLO	Collateralized loan obligation
Company	Truist Financial Corporation and subsidiaries (interchangeable with "Truist" below)
COVID-19	Coronavirus disease 2019
CRA	Community Reinvestment Act of 1977
CRE	Commercial real estate
CSA	Credit support annex
CVA	Credit valuation adjustment
Dodd-Frank Act	Dodd-Frank Wall Street Reform and Consumer Protection Act
DTA	Deferred tax asset
DVA	Debit valuation adjustment
FDIC	Federal Deposit Insurance Corporation
FFELP	Federal Family Education Loan Program
FFIEC	Federal Financial Institutions Examination Council
FHA	Federal Housing Administration
FHC	Financial Holding Company
FINRA	Financial Industry Regulatory Authority
FRB	Board of Governors of the Federal Reserve System
GAAP	Accounting principles generally accepted in the United States of America
GSE	U.S. government-sponsored enterprise
HVCRE	High volatility commercial real estate
ISDA	International Swaps and Derivatives Association, Inc.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

Term	Definition
LCR	Liquidity Coverage Ratio
LHFI	Loans and leases held for investment
LHFS	Loans held for sale
LIBOR	London Interbank Offered Rate
MBS	Mortgage-backed securities
MD&A	Management's Discussion and Analysis
MDB	Multilateral development bank
Merger	Merger of BB&T and SunTrust effective December 6, 2019
MRLCC	Market Risk, Liquidity and Capital Committee
MSR	Mortgage servicing right
NCOCB	North Carolina Office of the Commissioner of Banks
NIM	Net interest margin
NPA	Nonperforming asset
NSFR	Net stable funding ratio
NYSE	NYSE Euronext, Inc.
OCC	Office of the Comptroller of the Currency
OTC	Over-the-counter
Parent Company	Truist Financial Corporation, the parent company of Truist Bank and other subsidiaries
PSE	Public sector entity
RMC	Risk Management Committee
PFE	Potential future exposure
PPP	Paycheck Protection Program
PSE	Public sector entity
Rule	Basel III Final Rule
RWA	Risk-weighted assets
SCB	Stress Capital Buffer
SEC	Securities and Exchange Commission
SFA	Supervisory Formula Approach
SIFMA	Securities Industry and Financial Markets Association
SPE	Special purpose entity
SunTrust	SunTrust Banks, Inc.
SSFA	Simplified Supervisory Formula Approach
Tailoring Rules	Final rules changing the applicability thresholds for regulatory capital and liquidity requirements, issued by the OCC, FRB, and FDIC, together with the final rules changing the applicability thresholds for enhanced prudential standards issued by the FRB
TDR	Troubled debt restructuring
Truist	Truist Financial Corporation and subsidiaries, formerly BB&T Corporation
Truist Bank	Truist Bank, formerly Branch Banking and Trust company
U.S.	United States of America
U.S. Treasury	United States Department of the Treasury

## **Introduction**

Truist is a FHC and conducts its business operations through its bank subsidiary, Truist Bank, and other non-bank subsidiaries. Truist is a purpose-driven financial services company committed to inspire and build better lives and communities. Truist has leading market share in many high-growth markets in the country. The Company offers a wide range of services including retail, small business and commercial banking; asset management; capital markets; commercial real estate; corporate and institutional banking; insurance; mortgage; payments; specialized lending; and wealth management. Headquartered in Charlotte, North Carolina, Truist is the sixth-largest commercial bank in the U.S.

Truist Bank, Truist's largest subsidiary, was chartered in 1872 and is the oldest bank headquartered in North Carolina. Truist Bank provides a wide range of banking and trust services for consumer and commercial clients in its geographic markets through 2,884 offices as of September 30, 2020 and its digital platform.

As a BHC, Truist is subject to regulation under the BHCA and regulation, examination and supervision by the FRB. Truist Bank, a North Carolina state-chartered commercial bank that is not a member of the Federal Reserve System, is subject to regulation, supervision and examination by the NCOCB, the FDIC and the CFPB.

Truist and certain of its subsidiaries and affiliates, including those that engage in derivatives transactions, securities underwriting, market making, brokerage, investment advisory and insurance activities, are subject to other federal and state laws and regulations as well as supervision and examination by other federal and state regulatory agencies and other regulatory authorities, including the SEC, CFTC, FINRA and the NYSE.

### ***Pillar 3 Report Overview***

The Basel framework consists of a three "Pillar" approach:

- Pillar 1 establishes minimum capital requirements, defines eligible capital instruments and prescribes rules for calculating RWA.
- Pillar 2 requires banks to have an internal capital adequacy assessment process and requires that banking supervisors evaluate each bank's overall risk profile as well as its risk management and internal control processes.
- Pillar 3 encourages market discipline through disclosure requirements which allow market participants to assess the risk and capital profiles of banks.

This report provides information about Truist's capital structure, capital adequacy, risk exposures, RWA and risk management framework. It should be read in conjunction with Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended September 30, 2020 and the Consolidated Financial Statements for Bank Holding Companies - Form FR Y-9C for the period ended September 30, 2020. Truist's SEC filings are located on its website at [ir.truist.com/sec-filings](http://ir.truist.com/sec-filings).

The cross reference table located in the Appendix specifies the location of disclosures required by the Rule.

### ***Basis of Consolidation***

The basis of consolidation used for regulatory reporting is the same as that used under GAAP. The disclosures contained herein are on a consolidated basis unless otherwise noted. There are no entities within Truist that are deconsolidated for regulatory reporting, or whose capital is deducted. These disclosures have not been audited by the Company's external auditors.

See "Principles of Consolidation" in "Note 1. Basis of Presentation" in Truist's September 30, 2020 Form 10-Q for more information on the basis of consolidation.

### ***Government Response to COVID-19***

Congress, the FRB and the other U.S. state and federal financial regulatory agencies, as well as state legislatures and officials, have taken actions to mitigate disruptions to economic activity and financial stability resulting from COVID-19 and may continue to evolve such approaches and requirements in ways that further impact the business of the Company. The descriptions below summarize certain significant government actions taken in response to the COVID-19 pandemic. The descriptions are qualified in their entirety by reference to the particular statutory or regulatory provisions or government programs summarized.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

---

### The CARES Act

The CARES Act was signed into law on March 27, 2020 and subsequently has been amended several times. Among other provisions the CARES Act includes funding for the Small Business Administration to expand lending, relief from certain U.S. GAAP requirements to allow COVID-19-related loan modifications to not be categorized as TDRs and a range of incentives to encourage deferment, forbearance or modification of loans. One of the key CARES Act programs is the PPP, which temporarily expands the Small Business Administration's business loan guarantee program through August 8, 2020. PPP loans were available to a broader range of entities than ordinary Small Business Administration loans, require deferral of principal and interest repayment, and the loan may be forgiven in an amount equal to payroll costs and certain other expenses during either an eight-week or 24-week covered period.

The CARES Act contains additional protections for homeowners and renters of properties with federally backed mortgages, including a 60-day moratorium on the initiation of foreclosure proceedings beginning on March 18, 2020 and a 120-day moratorium on initiating eviction proceedings effective March 27, 2020. Borrowers of federally backed mortgages have the right under the CARES Act to request up to 360 days of forbearance on their mortgage payments if they experience financial hardship directly or indirectly due to the coronavirus-related public health emergency. FNMA, FHLMC, FHA and VA have extended their moratorium on foreclosures and evictions for single-family federally backed mortgages until at least December 31, 2020.

Also pursuant to the CARES Act, the U.S. Treasury has the authority to provide loans, guarantees and other investments in support of eligible businesses, states and municipalities affected by the economic effects of COVID-19. Some of these funds have been used to support the several FRB programs and facilities described below or additional programs or facilities that are established by the FRB under its Section 13(3) authority and meeting certain criteria.

### FRB Actions

The FRB has taken a range of actions to support the flow of credit to households and businesses. For example, on March 15, 2020, the FRB reduced the target range for the federal funds rate to 0 to 0.25% and announced that it would increase its holdings of U.S. Treasury securities and agency mortgage-backed securities and begin purchasing agency commercial mortgage-backed securities. The FRB has also encouraged depository institutions to borrow from the discount window and has lowered the primary credit rate for such borrowing by 150 basis points while extending the term of such loans up to 90 days. Reserve requirements have been reduced to zero as of March 26, 2020.

In addition, the FRB has established, or has taken steps to establish, a range of facilities and programs to support the U.S. economy and U.S. marketplace participants in response to economic disruptions associated with COVID-19. Through these facilities and programs, the FRB, relying on its authority under Section 13(3) of the Federal Reserve Act, has taken steps to directly or indirectly purchase assets from, or make loans to, U.S. companies, financial institutions, municipalities and other market participants.

FRB facilities and programs established include:

- a PPP Liquidity Facility to provide financing related to PPP loans made by banks;
- three Main Street Loan Facilities to purchase loan participations, under specified conditions, from banks lending to small and medium sized U.S. businesses;
- a Primary Dealer Credit Facility to provide liquidity to primary dealers through a secured lending facility;
- a Commercial Paper Funding Facility to purchase the commercial paper of certain U.S. issuers;
- a Primary Market Corporate Credit Facility to purchase corporate bonds directly from, or make loans directly to, eligible participants;
- a Secondary Market Corporate Credit Facility to purchase corporate bonds trading in secondary markets, including from exchange-traded funds, that were issued by eligible participants;
- a Term Asset-Backed Securities Loan Facility to make loans secured by asset-backed securities;
- a Municipal Liquidity Facility to purchase bonds directly from U.S. state, city and county issuers; and
- a Money Market Mutual Fund Liquidity Facility to purchase certain assets from, or make loans to, financial institutions providing financing to eligible money market mutual funds.

## **Capital Structure**

Truist and Truist Bank are subject to certain risk-based capital and leverage ratio requirements under the Rule adopted by the FRB, for Truist, and by the FDIC, for Truist Bank. These quantitative calculations are minimums, and the FRB and FDIC may determine that a banking organization, based on its size, complexity, or risk profile, must maintain a higher level of capital in order to operate in a safe and sound manner. Failure to be well capitalized or to meet minimum capital requirements could result in certain mandatory and possible additional discretionary actions by regulators that, if undertaken, could have an adverse material effect on Truist's operations or financial condition. Failure to be well capitalized or to meet minimum capital requirements could also result in restrictions on Truist's or Truist Bank's ability to pay dividends or otherwise distribute capital or to receive regulatory approval of applications.

As of September 30, 2020, Truist and Truist Bank qualified as well capitalized, with capital levels in excess of the minimum regulatory capital requirements.

### ***Definition of Capital***

Regulatory capital includes the following elements:

- CET1 capital includes primarily common shareholders' equity subject to certain regulatory adjustments and deductions, including with respect to goodwill, intangible assets, certain deferred tax assets, AOCI, and the impact of the current expected credit loss transition provision.
- Tier 1 capital is comprised primarily of CET1 capital, perpetual preferred stock and certain qualifying capital instruments.
- Tier 2 capital includes primarily qualifying subordinated debt and qualifying ACL. Tier 2 capital also includes, among other things, certain trust preferred securities.

A reconciliation of total shareholders' equity to CET1 capital, Tier 1 capital, Tier 2 capital and Total capital is presented in Truist's September 30, 2020 Form FR Y-9C. Refer to the "Consolidated Balance Sheets" in Truist's September 30, 2020 Form 10-Q for the components of total shareholders' equity.

### ***Capital in Subsidiaries***

At September 30, 2020, the amount of surplus capital of insurance subsidiaries included in regulatory capital was not material.

### ***RWA***

Under the Rule, Truist's and Truist Bank's assets, exposures, and certain off-balance sheet items are subject to risk weights used to determine the institutions' RWA. These RWA are used to calculate the required minimum capital ratios for Truist and Truist Bank. See the "Capital Ratios" section herein for further discussion of the capital ratio components.

The RWA calculation is used in determining the institution's capital requirement. RWA under the standardized approach are generally based on supervisory risk weightings that vary by counterparty type and asset class. The predefined risk weight classifications generally range from 0% for U.S. government securities to 600% for certain equity exposures, with a maximum risk weight classification of 1,250% for certain securitization exposures.

### **Market Risk Rule**

Certain large banking organizations with trading assets and liabilities above certain thresholds, including Truist, are subject to the Market Risk Rule and must adjust their risk-based capital ratios to reflect the market risk of their trading activities. Refer to the "Market Risk" section in the MD&A of the Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended September 30, 2020 for additional disclosures related to market risk management.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

### Components of RWA

The following table presents Truist's RWA by exposure type at September 30, 2020:

**Table 3-1**  
**Basel III Standardized Transitional Approach RWA**

(dollars in millions)	September 30, 2020
Credit risk (1):	
Corporate and consumer exposures (2)	\$ 289,923
Exposure to residential mortgage loans	41,905
Equity exposures	13,484
Exposure to GSEs	7,413
Exposure to OTC derivatives	5,615
Exposure to PSEs	4,873
Exposure to HVCRE loans	3,316
Securitization exposures	2,461
Exposure to sovereign entities	2,109
Exposure to past due loans	1,248
Exposure to depository institutions, foreign banks and credit unions	874
Exposure to statutory multifamily mortgage	753
Cleared transactions	61
Unsettled transactions	1
Total standardized credit risk	374,036
Total standardized market risk	3,384
Total standardized RWA	\$ 377,420

(1) Truist does not have any exposures to supranational entities and MDBs or default fund contributions.

(2) Corporate and consumer exposures also include other assets.

See the Company's September 30, 2020 Form Y-9C, Schedule HC-R Part I and Part II, on the FFIEC website for disclosures required by Basel III related to the following:

- Total standardized RWA by exposure type, including the related on- and off-balance sheet exposure;
- Standardized market RWA as calculated under the Market Risk Rule. Additional details are also available in the FFIEC 102 report on the FFIEC's website; and
- CET1, Tier 1 capital, and Total risk-based capital components and related calculations.

### **Capital Ratios**

Under capital adequacy guidelines and the regulatory framework for prompt corrective action, the Company must meet specific capital guidelines that involve quantitative measures of assets, liabilities and certain off-balance sheet items calculated pursuant to regulatory directives. Truist's capital amounts and classification also are subject to qualitative judgments by the regulators about components, risk weightings and other factors. Truist is in full compliance with these requirements. Banking regulations also identify five capital categories for insured depository institutions: well-capitalized, adequately capitalized, undercapitalized, significantly undercapitalized and critically undercapitalized. At September 30, 2020, Truist and Truist Bank were classified as "well-capitalized," and management believes that no events or changes have occurred subsequent to period end that would change this designation.

To avoid certain regulatory restrictions, Truist and Truist Bank are required to maintain minimum ratios of CET1 ratio of 4.5%, Tier 1 capital ratio of 6%, Total capital to risk-weighted assets ratio of 8%, Tier 1 capital to quarterly average tangible assets (leverage ratio) of 4%, and Tier 1 capital to total exposures (supplementary leverage) of 3%.

### Capital conservation buffer and Stress Capital Buffer

Truist and Truist Bank are also subject to a 2.5% capital conservation buffer for CET1, Tier 1 capital and Total capital. The capital conservation buffer is an amount above the minimum levels designed to ensure that banks remain well-capitalized, even in adverse economic scenarios.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

For certain large banking organizations, the capital conservation buffer could be supplemented by a countercyclical capital buffer of up to an additional 2.5% of risk-weighted assets. For Truist, this buffer is currently set at zero. An FRB policy statement establishes the framework and factors the FRB would use in setting and adjusting the amount of the countercyclical capital buffer. Covered banking organizations would generally have 12 months after the announcement of any increase in the countercyclical capital buffer to meet the increased buffer requirement, unless the FRB determines to establish an earlier effective date. See additional discussion related to the capital conservation buffer in the Company's September 30, 2020 Form 10-Q.

The FRB adopted a final rule that integrates its annual capital planning and stress testing requirements with existing regulatory capital requirements. For risk-based capital requirements, the SCB replaces the capital conservation buffer, which was 2.5% through September 30, 2020. Under the final rule, beginning in the 2020 CCAR cycle, the FRB notified Truist of its SCB, which is equal to the greater of (i) the difference between its starting and minimum projected CET1 capital ratios under the severely adverse scenario in the supervisory stress test, plus the sum of the dollar amount of Truist's planned common stock dividends for each of the fourth through seventh quarters of the planning horizon as a percentage of risk-weighted assets, or (ii) 2.5%.

The final rule made related changes to the capital planning and stress testing process. The rule also eliminates the assumption that Truist's balance sheet assets would increase over the planning horizon. In addition, the rule provided that Truist is not restricted to dividend distributions as a result of specific provisions included in the rule. Truist will no longer be required to seek prior approval to make capital distributions in excess of those included in its capital plan, unless otherwise directed by the FRB.

The FRB assigned Truist a SCB of 2.7%, which is effective from October 1, 2020 through September 30, 2021. Consistent with the FRB's mandate across the industry, Truist resubmitted its capital plan in early November 2020 to reflect changes in financial markets and the macroeconomic outlook.

The FRB also took several actions following its 2020 stress tests in light of the uncertainty caused by the COVID-19 pandemic. Specifically, for the third and fourth quarter of 2020, the FRB is requiring certain large banking organizations, including Truist, to suspend share repurchases, cap common dividends per share to the amount paid in the second quarter, and further limit dividends according to a formula based on recent income.

The minimum, well capitalized and capital conservation buffer ratio requirements at September 30, 2020 are as follows:

**Table 3-2**  
**Capital Requirements and Targets**  
**September 30, 2020**

	Well Capitalized			Minimum Capital Plus Capital Conservation Buffer (3)	Truist Targets (1)	
	Minimum Capital	Truist	Truist Bank		Interim Operating (2)	Stressed
CET1	4.5 %	NA	6.5 %	7.0 %	8.0 %	7.0 %
Tier 1 capital	6.0	6.0	8.0	8.5	9.3	8.5
Total capital	8.0	10.0	10.0	10.5	11.3	10.5
Leverage ratio	4.0	NA	5.0	NA	7.5	7.0
Supplementary leverage ratio	3.0	NA	NA	NA	6.5	6.0

- (1) The Truist targets are subject to revision based on finalization of pending regulatory guidance and other strategic factors.
- (2) Truist's goal is to maintain capital levels above all regulatory minimums.
- (3) The current capital conservation buffer of 2.5% was replaced by the SCB of 2.7% effective October 1, 2020.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

For additional information refer to "Item 1. Business" section and the "Capital" MD&A section in Truist's Annual Report on Form 10-K for the year ended December 31, 2019, and the "Capital" MD&A section in Truist's September 30, 2020 Form 10-Q.

The following table presents regulatory capital and risk-based capital ratios for Truist and Truist Bank at September 30, 2020:

**Table 3-3**  
**Capital Ratios**  
**September 30, 2020**

(dollars in millions)	Ratio	Amount
<b>Truist</b>		
CET1	10.0 %	\$ 37,879
Tier 1 capital	12.2	45,925
Total capital	14.6	55,030
Leverage	9.6	45,925
Supplementary leverage ratio	8.9	45,925
<b>Truist Bank</b>		
CET1	11.1 %	\$ 40,740
Tier 1 capital	11.1	40,740
Total capital	13.1	47,992
Leverage	8.7	40,740
Supplementary leverage ratio	7.6	40,740

### Supplementary Leverage Ratio

In response to the COVID-19 pandemic, the FRB has adopted an interim final rule that temporarily changes the supplementary leverage ratio to exclude U.S. Treasury securities and deposits at Federal Reserve Banks from the calculation of a firm's supplementary leverage exposure. The interim final rule applies to BHCs and became effective April 1, 2020 and will remain in effect through March 31, 2021. The banking regulators also adopted the option to apply these exclusions for insured depository institutions, but Truist Bank elected not to adopt the exclusions.

### **Other capital ratio considerations**

#### Revisions to Definition of Eligible Retained Income

The U.S. banking agencies have adopted a final rule altering the definition of eligible retained income in their respective capital rules. Under the new rule, eligible retained income is the greater of a firm's (i) net income for the four preceding calendar quarters, net of any distributions and associated tax effects not already reflected in net income, and (ii) average net income over the preceding four quarters. This definition applies with respect to all of Truist's capital requirements.

#### Current Expected Credit Losses Methodology

The U.S. banking agencies have adopted a final rule that permits banking organizations that implement CECL before the end of 2020 to elect to follow the three-year transition available under the prior rule or a new five-year transition to phase in the effects of CECL on regulatory capital. Under the five-year transition, the banking organization would defer for two years 100% of the day-one effect of adopting CECL and 25% of the cumulative increase in the allowance for credit losses since adoption of CECL. Following the first two years, the electing organization will phase out the aggregate capital effects over the next three years consistent with the transition in the original three-year transition rule. Truist has elected to use the five-year transition to phase in the impacts of CECL on regulatory capital.

### **Capital Adequacy Process**

The maintenance of appropriate levels of capital is a top priority of management and is monitored on a regular basis. Truist's principal goals related to the maintenance of capital are to provide adequate capital to support Truist's risk profile consistent with its Board-approved risk appetite, provide financial flexibility to support future growth and client needs, comply with relevant laws, regulations, and supervisory guidance, achieve optimal credit ratings for Truist and its subsidiaries, and provide a competitive return to shareholders.

### ***Enhanced Prudential Standards and Regulatory Tailoring Rules***

Truist is subject to enhanced prudential standards and early remediation requirements whereby the Company must adhere to more stringent standards than those applicable to smaller institutions, including liquidity and capital requirements, leverage limits, stress testing, resolution planning, and risk management standards.

On June 14, 2018, the FRB finalized rules that establish single-counterparty credit limits for banking organizations with greater than \$250 billion in total consolidated assets. Under the single-counterparty credit limit, Truist will be subject to a limit of 25% of Tier 1 capital for aggregate net credit exposures to any other unaffiliated counterparty.

In October 2019, the federal banking agencies adopted final rules for liquidity requirements that amend the LCR Rule such that bank holding companies with assets between \$250 billion and \$700 billion, and less than \$75 billion in certain other risk related exposures, (Category III institutions) would be subject to a reduced LCR requirement. Truist became a Category III institution effective January 1, 2020, after completing the merger of equals between BB&T and SunTrust on December 6, 2019. See Truist's Annual Report on Form 10-K for the year ended December 31, 2019 for a discussion of requirements for Category III banking organizations.

The U.S. banking agencies have finalized a rule to implement the NSFR in the United States. The NSFR rule requires each of Truist and Truist Bank to maintain an amount of available stable funding, which is a weighted measure of a company's funding sources over a one-year time horizon, calculated by applying standardized weightings to the company's equity and liabilities based on their expected stability, that is no less than the amount of required stable funding, which is calculated by applying standardized weightings to assets, derivatives exposures and certain other items based on their liquidity characteristics. As a Category III banking organization, Truist and Truist Bank are subject to an NSFR requirement equal to 85% of the full requirement. These requirements will become effective as of July 1, 2021.

### ***Capital Planning and Stress Testing Requirements***

Truist regularly performs stress testing on its capital levels and is required to periodically submit the Company's capital plans and stress testing results to the banking regulators. Management regularly monitors the capital position of Truist on both a consolidated and bank-level basis. In this regard, management's overriding policy is to maintain capital at levels that are in excess of internal capital targets, which are above the regulatory "well capitalized" minimums. Management has implemented stressed capital ratio minimum targets to evaluate whether capital ratios calculated after the effect of alternative capital actions are likely to remain above minimums specified by the FRB for the annual CCAR process. Breaches of stressed minimum targets prompt a review of the planned capital actions included in Truist's capital plan.

Truist must submit an annual capital plan to the FRB that reflects its projected financial performance under baseline and stressful macroeconomic conditions, and proposed capital distributions must meet SCB requirements based on the FRB's annual CCAR process. Truist generally may pay dividends and interest on capital securities and repurchase or retire capital securities in accordance with a capital plan that meets SCB requirements.

The FRB's CCAR framework and the Dodd-Frank Act stress testing framework require large BHCs such as Truist to conduct company-run stress tests and subject them to supervisory stress tests conducted by the FRB. Among other things, the company-run stress tests employ stress scenarios provided by the FRB and incorporate the Dodd-Frank Act capital actions, which are intended to normalize capital distributions across large U.S. BHCs. In addition, Truist is required to conduct annual stress tests using internally-developed scenarios. The FRB also conducts CCAR and Dodd-Frank Act supervisory stress tests employing stress scenarios and internal supervisory models. The results of these stress tests are used by the FRB to determine the BHC's SCB requirements. As a Category III banking organization, Truist will be subject to supervisory stress testing on an annual basis and company-run stress testing on a biennial basis.

### ***Risk Management***

Truist maintains a comprehensive risk management framework supported by people, processes and systems to identify, measure, monitor, manage and report significant risks arising from its exposures and business activities. Effective risk management involves appropriately balancing risk and return, operating in a safe and sound manner, and complying with applicable laws and regulations. The Company's risk management framework is designed to ensure that business strategies and objectives are executed in alignment with its risk appetite.

Truist is committed to fostering a culture that supports transparency and escalation of risks across the organization. All teammates are responsible for upholding the Company's purpose, mission, and values, and are encouraged to speak up if there is any activity or behavior that is inconsistent with the Company's culture. The Truist Code of Ethics guides and unites the Company's decision making and informs teammates on how to act in the absence of specific guidance.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

---

Capital, liquidity and resolution and recovery planning are overseen by various oversight committees. Regular reporting is provided to the Board of Directors and Executive Leadership on the assessments of risk, stress test results and governance of the models and tools used for these processes including CAP.

The Board of Directors meets regularly to provide oversight regarding the management, objectives and goals of the organization with regard to capital adequacy. Stress testing methodologies ensure the information provided captures forecasted losses for all material elements of the balance sheet and income statement. These results are provided for the baseline and stress scenarios, enabling the Board of Directors and risk committees to review expected performance against capital goals, targets, and risk appetite.

Refer to the "Risk Management" and "Capital" sections of the MD&A in Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended September 30, 2020 for more information regarding the Company's risk management framework and CAP.

### Credit Risk

Credit risk is the risk to current or anticipated earnings or capital arising from the default, inability or unwillingness of a borrower, obligor, or counterparty to meet the terms of any financial obligation to Truist or otherwise perform as agreed. Credit risk exists in all activities where success depends on the performance of a borrower, obligor, or counterparty. Credit risk arises when Truist funds are extended, committed, invested, or otherwise exposed through actual or implied contractual agreements, whether on or off-balance sheet. Credit risk increases when the credit quality of an issuer whose securities or other instruments the bank holds deteriorates.

Truist has established the following general practices to manage credit risk:

- limiting the amount of credit that individual lenders may extend to a borrower;
- establishing a process for credit approval accountability;
- careful initial underwriting and analysis of borrower, transaction, market and collateral risks;
- ongoing servicing and monitoring of individual loans and lending relationships;
- continuous monitoring of the portfolio, market dynamics and the economy; and
- periodically reevaluating the Company's strategy and overall exposure as economic, market and other relevant conditions change.

Truist regularly monitors various segments of its credit portfolios to assess potential concentration risks. Management is actively involved in the credit approval and review process, and risk acceptance criteria are adjusted as needed to reflect the Company's risk appetite. Consistent with established risk management objectives, the Company utilizes various risk mitigation techniques, including collecting collateral and security interests, obtaining guarantees, and, to a limited extent, through the purchase of credit loss protection via third party insurance and/or use of credit derivatives such as CDS.

The Company categorizes its loan portfolio into three segments: commercial lending, consumer lending and credit card. The Company further disaggregates its commercial and consumer loans into various classes based on their underlying risk characteristics.

In the commercial portfolio, risk concentrations are evaluated regularly on both an aggregate portfolio level and on an individual customer basis. The Company manages its commercial exposure through portfolio targets, limits and transactional risk acceptance criteria as well as other techniques, including but not limited to, loan syndications/participations, loan sales, collateral, structure, covenants, and other risk-reduction techniques. The accompanying disclosures are presented net of participations sold.

In the consumer portfolio, concentrations are evaluated based on purpose, geographic location, and risk characteristics such as credit rating, loan-to-value ratio, and term, with a focus on trends and concentrations at the portfolio level where potential risk concentrations can be remedied through changes in underwriting policies and portfolio guidelines.

Additional disclosures related to the Company's credit exposures and credit risk policies are included in the Company's Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended September 30, 2020.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

### Maturities

The following tables provide the remaining maturity distribution by category for loans and leases and off balance sheet credit commitments, which includes unfunded commitments and letters of credit. The contractual amounts of off balance sheet credit commitments represent the maximum exposure to credit loss in the event of default by the borrower if the borrower were to fully draw against the commitment. The Company manages this credit risk using the same credit policies it applies to loans. Management assesses the borrower's credit worthiness to determine the necessary collateral, which may include marketable securities, receivables, inventory, equipment and real estate. For additional information, refer to the "Lending Activities" section of the MD&A in Truist's Annual Report on Form 10-K for the year ended December 31, 2019 and Quarterly Report on Form 10-Q for the period ended September 30, 2020.

**Table 5-1**  
**Carrying Amount of Loans and Leases by Maturity and Exposure Type**  
**September 30, 2020**

(Dollars in millions)	One Year and Less	1 to 5 Years	After 5 Years	Total
<b>Commercial:</b>				
Commercial and industrial	\$ 25,194	\$ 78,653	\$ 37,027	\$ 140,874
CRE	3,891	14,857	8,726	27,474
Commercial construction	1,771	4,418	583	6,772
Lease financing	311	2,642	2,540	5,493
<b>Retail:</b>				
Residential mortgage	30	441	49,908	50,379
Residential home equity and direct	1,403	9,536	15,619	26,558
Indirect auto	317	13,176	11,776	25,269
Indirect other	198	4,649	6,680	11,527
Student (1)	—	—	7,480	7,480
Credit card	4,801	—	—	4,801
<b>Total</b>	<b>\$ 37,916</b>	<b>\$ 128,372</b>	<b>\$ 140,339</b>	<b>\$ 306,627</b>

(1) Student loans are presented with maturities of five years or more. The majority of student loan agreements held by the Company do not define maturity dates because the start of loan repayment depends on the types of deferment periods and grace periods offered.

The ending and average contract (notional) amounts of off balance sheet credit commitments, excluding those commitments considered derivatives, are shown below. Average amounts are based upon the simple average of the current and prior quarter ending balances.

**Table 5-2**

Standby (3)	\$ 1,757	\$ 2,655	\$ 56	\$ 4,468	\$ 4,549
Commercial	30	14	—	44	35

(1) Approximately \$51.5 billion are unconditionally cancellable for the purposes of calculating regulatory capital.

(2) The maturities of residential mortgage loan commitments are based on the loan maturities upon funding.

(3) Excludes \$3.8 billion of unfunded commitments and \$417 million of letters of credit that have been conveyed to others.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

### Geographic Disclosures

For the geographic disclosures contained herein, amounts are assigned to a state based on the physical billing address of the client.

The following tables provide the geographical distribution of commercial and consumer exposures. The credit exposure includes loans and contractual commitments to extend credit. Commercial loans that are 90 days or more past due and accruing interest are immaterial. Government guaranteed loans are not placed on nonaccrual status regardless of delinquency because collection of principal and interest is reasonably assured. The past due status of loans that received a deferral under the CARES Act is generally frozen during the deferral period. In certain limited circumstances, accommodation programs result in the delinquency status being reset to current.

There are no nonperforming credit card loans as they are charged-off rather than being reclassified as nonperforming.

**AFS Investment Securities**

Truist invests in securities allowable under bank regulations. These securities may include obligations of the U.S. Treasury, U.S. government agencies, GSEs (including MBS), bank eligible obligations of any state or political subdivision, non-agency MBS, structured notes, bank eligible corporate obligations (including corporate debentures), commercial paper, negotiable CDs, bankers acceptances, mutual funds and limited types of equity securities. The most important feature management relies on when assessing credit risk for U.S. Treasury securities and Agency MBS is the guarantee of the Federal government or its agencies.

U.S. Treasury, GSE and Agency MBS represented 99.3% of the total securities portfolio as of September 30, 2020.

**Industry Disclosures**

The following tables provide industry distribution by major types of commercial credit exposure. The credit exposure includes loans and contractual commitments to extend credit. Industry classification for commercial and industrial loans is based on the North American Industry Classification System. Commercial real estate loans are classified based on type of property. Consumer credit exposures and credit card exposures have been excluded from these tables.

### ***Counterparty Credit Risk-Related Exposures***

Counterparty credit risk is the risk that a counterparty to a transaction with the Company fails to perform. This risk is a byproduct of transactions undertaken by the Company to facilitate a client's financing and hedging needs and can also result from the Company's normal balance sheet management, risk management, and funding activities. Counterparty risk is a category of credit risk often associated with capital markets activities, including OTC derivatives and securities financing.

For further information on counterparty credit risk, refer to "Risk Management" in the MD&A, "Note 3. Securities Financing Activities," "Note 16. Derivative Financial Instruments" in the Truist's September 30, 2020 Form 10-Q, and "Note 1. Basis of Presentation". Truist's Annual Report on Form 10-K for the year ended December 31, 2019.

#### OTC derivatives

As a dealer and market maker, the Company uses OTC derivatives primarily to support client hedging and risk management activities, as well as in an end-user capacity to manage its own balance sheet risk exposures. As a financial entity, certain interest rate swaps and CDS transactions entered into by the Company or its subsidiaries are subject to mandatory clearing. At September 30, 2020, the Company had \$325 million in notional amount of purchased OTC credit derivatives related to management of its own balance sheet risk exposures. Additionally, the Company had \$3.0 billion of purchased notional and \$6.4 billion of sold notional OTC credit derivatives to support client hedging and risk management activities. Additional details of the Company's use of derivatives are included in "Note 16. Derivative Financial Instruments" in the Truist's September 30, 2020 Form 10-Q.

Counterparty credit risk management is integrated into the Company's credit risk management function. For transactions that generate meaningful counterparty credit risk, credit officers first perform a credit underwriting of the counterparty and assign an internal risk rating, before finally determining an aggregate credit exposure limit. Furthermore, if multiple underlying products and risk exposures are involved, then separate limits are assigned for each product with the counterparty. The counterparty exposure arising from OTC derivatives and securities lending transactions is aggregated with all other borrower exposures for risk management purposes.

In addition to counterparty selection and ongoing monitoring, documentation and collateral management are central to the Company's counterparty risk management efforts. Transactions are typically executed under master netting agreements. These documents provide a variety of legal protections, most notably the ability to close out all trades under that agreement on a net basis in the event of a counterparty default. The Company's legal department chairs a committee that reviews master netting agreements to confirm the enforceability of netting and collateral arrangements and generally obtains third party legal opinions regarding enforceability.

The regulatory requirement to centrally clear eligible derivative transactions with eligible CCPs has reduced the Company's counterparty credit exposure to dealers; however it has in turn increased its exposure to CCPs. The Company manages its exposure to CCPs using the same risk management practices as used for other counterparties and in accordance with supervisory guidance.

The values of OTC derivatives are based on the movement in one or more underlying variables (e.g., interest rates, credit spreads, foreign exchange rates, etc.). For internal risk management purposes, the Company establishes credit limits based on a measure of PFE, a statistical measure (at a high confidence interval) of the amount that a counterparty could owe the Company at some future point in time, taking into account collateral requirements and legally enforceable netting arrangements. The PFE, current credit exposure or mark-to-market, and collateral values, if applicable, are refreshed daily and used to calculate total counterparty credit exposure, which is compared against pre-established limits. The Company has an established limit exception management process in place which identifies, escalates, remediates, and documents any risk exposures that may exceed limits. As a bank subject to the standardized approach, RWA for OTC derivatives is determined using the methodology prescribed in the Rule for calculating PFE, and as such, the Company does not use its internal model generated PFE for that purpose.

The Company typically establishes zero threshold margin arrangements with dealers, governed under ISDA/CSA documents, such that when the fair value of a derivative changes, the out-of-the-money counterparty posts collateral to the in-the-money counterparty; collateral is generally exchanged on a daily basis. OTC derivative transactions with non-dealer clients are generally not subject to the same margin arrangements; however, they are still subject to master netting arrangements and the Company uses other available risk management techniques when necessary.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

---

For OTC derivative transactions subject to a CSA, the Company typically only accepts high quality, liquid collateral instruments such as cash, U.S. Treasury, or agency-issued instruments, subject to applicable haircuts, as necessary. This collateral generally qualifies as financial collateral pursuant to the Rule. Cash represents the majority of the Company's collateral positions and is typically held in the Company's account or at another financial institution. Securities collateral is held at the Company's custodian bank in the Company's name and is generally controlled by the Company. In limited circumstances collateral may be posted to an independent custodian bank for the benefit of the Company; in these circumstances, the Company does not have direct control over the collateral.

All OTC derivative transactions subject to margining requirements are monitored daily by an independent control function to ensure that collateral calls are issued and met in a timely manner. This function also ensures that any excess collateral posted by the Company to a counterparty is actively managed and withdrawn when no longer required. All collateral is valued daily. The collateral control function follows established procedures to resolve any disputes on the amount of collateral required, and escalation procedures are in place to ensure senior management is informed of any material disputes on a timely basis. In a limited number of situations, the Company's CSAs contain ratings based thresholds, such that the Company would need to post additional collateral to the degree that it suffered a credit downgrade.

Derivative instruments are priced using observable market inputs at a mid-market valuation point and take into consideration appropriate valuation adjustments for collateral, market liquidity, and counterparty credit risk. For purposes of determining fair value adjustments to its derivative positions, the Company takes into consideration the credit profile and likelihood of default by counterparties and itself, as well as, its net exposure, which considers legally enforceable master netting agreements and financial collateral along with remaining maturities. The expected loss of each counterparty, the CVA, is estimated using market-based views of counterparty default probabilities observed in the single-name CDS market, when available and of sufficient liquidity. When single-name CDS market data is not available or not of sufficient liquidity, the probability of default is estimated using a combination of the Company's internal risk rating system and sector/rating based CDS data.

For purposes of estimating the Company's own credit risk on derivative liability positions, the DVA, the Company uses probabilities of default from observable, sector/rating based CDS data. Information on the Company's fair value measurements can be found in the Company's September 30, 2020 Form 10-Q in "Note 15. Fair Value Disclosures."

### Securities financing

The securities financing market encompasses both repurchase and reverse repurchase agreements, as well as securities lending/borrowing transactions. These transactions are structured such that borrowers post collateral in exchange for the ability to borrow cash or securities. Securities financing transactions enable cost-effective borrowing for clients and the Company and facilitate a variety of market making activities. Truist's securities financing transactions are subject to the same risk management procedures, and applicable RWA calculations consider eligible collateral and / or the counterparty to the underlying transaction.

Securities financing transactions are typically secured by high-quality, liquid collateral. The Company establishes limits on counterparties using the Basel Collateral Haircut methodology, measuring in this case the amount that the Company could lose if it were forced to close out the transaction ahead of scheduled maturity in a stressed situation. The Company may supplement its credit limits with notional limits based on the counterparty and/or the size of the financing arrangement.

Securities financing transactions provide for the regular movement of collateral so that the lender maintains an appropriate margin. The Company monitors its securities financing positions on a daily basis and calls for additional collateral as needed. The collateral received is typically held in an account with the Company's securities custodian.

### **Credit Risk Mitigation**

The Rule allows eligible financial collateral, guarantees, and credit derivatives to be recognized in the calculation of RWA. The Company's use of credit risk mitigants in the calculation of RWA includes eligible collateral primarily in the form of U.S. Treasury or agency securities as well as cash. When financial collateral is obtained that qualifies as eligible collateral under the Rule, the eligible collateral can be substituted for the collateralized portion of the credit exposure in the RWA calculation. Similarly, when an eligible guarantee is received, the risk weight applicable to the eligible guarantor would apply to the exposure amount covered by the guarantee.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

The following table summarizes OTC derivative contracts covered by eligible collateral:

**Table 7-1**  
**Total Exposure of OTC Derivative Contracts Covered by Eligible Collateral**  
**September 30, 2020**

(dollars in millions)	Gross Current Credit Exposure	Potential Future Exposure	Total Exposure
Interest rate	\$ 4,075	\$ 556	\$ 4,631
Total return swaps	47	7	54
Commodity	162	176	338
Risk participation agreements	478	55	533
Foreign exchange	140	134	274
Equities	1,015	727	1,742
Total derivative gross credit exposure	5,917	1,655	7,572
Amounts subject to master netting arrangements	(1,236)	—	(1,236)
Collateral held	(465)	—	(465)
Net exposure for derivatives covered by eligible collateral	\$ 4,216	\$ 1,655	\$ 5,871

Truist has certain loans and other assets, totaling approximately \$21.7 billion, which have guarantees by the U.S. government. This includes \$12.2 billion of PPP loans, which receive a zero percent risk weight.

## Securitizations

### Overview

The Basel III framework for securitizations addresses the capital treatment for exposures that involve the tranching of credit risk and categorizes securitizations as either traditional or synthetic.

The Rule describes securitization transactions as:

- All or a portion of the credit risk of one or more underlying exposures is transferred to one or more third parties other than through the use of credit derivatives or guarantees;
- The credit risk associated with the underlying exposures has been separated into at least two tranches reflecting different levels of seniority;
- Performance of the securitization exposures is solely dependent on the performance of the underlying exposures; and
- All or substantially all of the underlying exposures are financial exposures.

A synthetic securitization shares the same attributes as a traditional securitization, except that all or a portion of the credit risk of one or more underlying assets is retained or transferred to one or more third parties through the use of one or more credit derivatives or guarantees.

Any securitization where one or more of the underlying exposures are a securitization exposure is considered to be a resecuritization. The Company does not have resecuritization exposures at September 30, 2020.

### Securitization process

The Company's current exposure to securitizations includes primarily loans to SPEs (not sponsored by the Company) that are designed to meet client needs for long-term financing of assets or working capital. These securitization arrangements assist the Company's clients in funding their financial assets. Exposure amounts at September 30, 2020 are provided below in Tables 8-1 and 8-2.

The Company also originates and sells certain mortgages to Fannie Mae and Freddie Mac and issues and sells Ginnie Mae MBS. The Company transfers loans to securitization entities sponsored by these agencies. The loans are exchanged for cash or securities that are readily redeemable for cash, with servicing rights retained. The Company has made certain representations and warranties with respect to the transfer of these loans and has entered into a loss share guarantee related to certain loans transferred to Fannie Mae.

## Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation  
September 30, 2020

---

At September 30, 2020, the Company held \$346 million of LHFS that it intends to securitize with Ginnie Mae. The Company periodically evaluates securitizations as a source of alternate financing; however, it does not expect securitization to comprise a significant amount of total funding.

### ***Due diligence***

The Company analyzes the credit profile of each securitization exposure prior to entering into that position, and documents such due diligence within the timeframe required under the Rule. The due diligence procedures are designed to provide the Company with a comprehensive understanding of the features that would materially affect the performance of its exposures.

The Company's due diligence procedures include analyzing and monitoring:

- Information regarding the performance of the underlying credit exposures and relevant market data;
- Structural and other enhancement features that may affect the credit quality of a securitization; and
- Credit profile of the seller/servicer of the assets securitized.

The level of detail included in the due diligence procedures is commensurate with the complexity of each securitization position held. In addition to pre-trade due diligence, the due diligence procedures are also performed on a periodic basis for each securitization position.

### ***Risks***

Securitization transactions involve a number of risks including credit risk and seller/servicer risk. Credit risk arises where the underlying assets fail to perform (e.g., payment rates, dilution, write-offs/losses), such that the credit enhancement is insufficient to protect the Company's investment. Seller/servicer risk represents the reliance on the seller and/or servicer of the assets to perform its duties under the securitization agreement and make certain representations and warranties as to the underlying collateral. The risks in the securitization loan portfolio are monitored monthly by comparing performance of assets to the structural requirements. The Company manages these risks (both pre and post commencement of a position) as part of its comprehensive risk management framework, which is described in the Company's September 30, 2020 Form 10-Q.

### ***Risk-based capital approach***

The Basel III standardized approach requires the application of the SSFA or, if not subject to the Market Risk Rule, the gross-up approach for calculating RWA for securitization exposures. The Company is subject to the Market Risk Rule and, therefore, applies the SSFA to its securitization exposures. A risk weight of 1,250% must be applied to a securitization exposure where the Company does not apply the SSFA.

The SSFA requires the following inputs to calculate regulatory capital:

- *Attachment Point*: the point at which collateral losses from underlying assets backing a securitization tranche will first be applied to the tranche in the form of principal write-downs;
- *Detachment Point*: the point at which the tranche will be completely written-down as a result of losses from the collateral backing the tranche;
- *Weighted Average Capital*: the weighted average capital charge for the assets in the securitization;
- *Seriously Delinquent*: the percentage of underlying collateral that is seriously delinquent (e.g., 90+ days past due, in foreclosure, in bankruptcy); and
- *Calibration Parameter*: a parameter that increases the riskiness of a tranche for re-securitizations.

The risk-based capital requirement under the SSFA is the exposure amount (including any accrued interest receivable on the exposure) multiplied by the higher of either the calculated risk weight, determined by the inputs listed above, or a 20% risk weight.

**Pillar 3 Regulatory Capital Disclosures**

Truist Financial Corporation  
September 30, 2020

**Risk-weighted assets for securitization exposures**

The following table presents securitization exposures and their applicable risk weighting as of September 30, 2020. The amount of exposures that were past due and impaired on September 30, 2020 were immaterial, and no losses were incurred on the exposures during the year ended September 30, 2020.

**Table 8-1  
Total Securitizations by Risk Weight Category  
September 30, 2020**

(dollars in millions)	Exposure Amount	RWA	RWA %	RWA Method
Exposure type:				
LHFI	\$ 3,017	\$ 1,632	54 %	SSFA
Unfunded commitment related to LHFI	3,391	724	21	SSFA
Securities AFS:				
Securitization	26	5	19	SSFA
Other off-balance sheet amount	8	100	1250	1250 %
<b>Total securitization</b>	<b>\$ 6,442</b>	<b>\$ 2,461</b>		

The following table presents securitization exposures and underlying collateral type as of September 30, 2020.

Trade receivables	\$ 636	\$ 885	\$ 1,521	\$ 308
Commercial and Industrial	995	497	1,492	298
Consumer Loans	576	1,003	1,579	323
Other	836	1,014	1,850	1,532
<b>Total</b>	<b>\$ 3,043</b>	<b>\$ 3,399</b>	<b>\$ 6,442</b>	<b>\$ 2,461</b>

## Equity Securities Not Subject to Market Risk Rule

The Company holds equity securities for various purposes. The Company's investments in private equity funds are generally held to realize a potential profit; equity securities in pension plans are held to reduce future pension expense; investments in affordable housing are made to generate tax credits and investments in certain trade organizations are required to realize the benefits of being a member.

The Company has total equity exposures of approximately \$14.1 billion, with \$5.0 billion in individual equities and \$9.1 billion in equity funds at September 30, 2020. The majority of the individual investments are related to the Company's CRA activities, including tax-advantaged investments. The Company uses the simple risk-weight approach for its individual equity securities. The equity funds consist of BOLI, private equity, pension fund assets, money market and other equity funds. The Company uses the full look-through approach for BOLI assets in separate accounts. Investment guidelines specify objectives and constraints for separate account BOLI investment funds, including permitted and non-permitted investments, concentration and diversification requirements, credit quality requirements and duration parameters. There were no unrealized gains not recognized through earnings included in Tier 2 capital for the year ended September 30, 2020.

Non-marketable equity securities are generally recorded either at historical cost or using the equity method. Refer to "Note 1. Basis of Presentation" in Truist's Annual Report on Form 10-K for the year ended December 31, 2019 for accounting policies related to equity investments and the valuation of financial instruments.

At September 30, 2020, the Company held approximately \$604 million of exposures in equity funds that relate to the Company's nonqualified defined contribution plan. Because there is an offsetting liability for these investments, there is no impact to earnings or equity from these investments as changes in the fair value of the investments are recorded in income with an offsetting change in personnel expense.

Equity securities carried at cost and the related unrealized gains and losses were immaterial at September 30, 2020.

The following table summarizes the Company's equity securities not subject to the Market Risk Rule:

**Table 9-1**  
**Equity Securities Not Subject to Market Risk Rule**  
**September 30, 2020**

(dollars in millions)	Exposure	RWA	Capital Impact of RWA (1)
20% risk weight	\$ 165	\$ 33	\$ 3
100% risk weight	5,195	5,195	416
Full look-through approach	8,735	8,256	660
Total	\$ 14,095	\$ 13,484	\$ 1,079
Public	\$ 5,984		
Nonpublic	8,111		
Total	\$ 14,095		

(1) Calculated by multiplying RWA by the minimum total risk-based capital ratio of 8%.

<b>Quantitative:</b>	
(b) The increase (decline) in earnings or economic value (or relevant measure used by management) for upward and downward rate shocks according to management's method for measuring interest rate risk for non-trading activities, categorized by currency (as appropriate).	<b>Form 10-Q:</b> Item 2 - MD&A - Table 21 Item 2 - MD&A - Table 23

## Forward-Looking Statements

This document contains "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995, regarding the financial condition, results of operations, business plans and the future performance of Truist. Words such as "anticipates," "believes," "estimates," "expects," "forecasts," "intends," "plans," "projects," "may," "will," "should," "would," "could" and other similar expressions are intended to identify these forward-looking statements.

Forward-looking statements are not based on historical facts but instead represent management's expectations and assumptions regarding Truist's business, the economy and other future conditions. Such statements involve inherent uncertainties, risks and changes in circumstances that are difficult to predict. As such, Truist's actual results may differ materially from those contemplated by forward-looking statements. While there can be no assurance that any list of risks and uncertainties or risk factors is complete, important factors that could cause actual results to differ materially from those contemplated by forward-looking statements include the following, without limitation, as well as the risks and uncertainties more fully discussed under Part II, Item 1A-Risk Factors in Truist's Form 10-Q for the quarter ended September 30, 2020 and in Truist's Form 10-K for the year ended December 31, 2019:

- the COVID-19 pandemic has disrupted the global economy, adversely impacted Truist's financial condition and results of operations, including through increased expenses, reduced fee income and net interest margin and increases in the allowance for credit losses, and continuation of current conditions could worsen these impacts and also adversely affect Truist's capital and liquidity position or cost of capital, impair the ability of borrowers to repay outstanding loans, cause an outflow of deposits, and impair goodwill or other assets;
- risks and uncertainties relating to the merger of BB&T and SunTrust ("Merger"), including the ability to successfully integrate the companies or to realize the anticipated benefits of the Merger;
- expenses relating to the Merger and integration of heritage BB&T and heritage SunTrust;
- deposit attrition, client loss or revenue loss following completed mergers or acquisitions may be greater than anticipated;
- changes in the interest rate environment, including the replacement of LIBOR as an interest rate benchmark, which could adversely affect Truist's revenue and expenses, the value of assets and obligations, and the availability and cost of capital, cash flows, and liquidity;
- volatility in mortgage production and servicing revenues, and changes in carrying values of Truist's servicing assets and mortgages held for sale due to changes in interest rates;
- management's ability to effectively manage credit risk;
- inability to access short-term funding or liquidity;
- loss of client deposits, which could increase Truist's funding costs;
- changes in Truist's credit ratings, which could increase the cost of funding or limit access to capital markets;
- additional capital and liquidity requirements;
- regulatory matters, litigation or other legal actions, which may result in, among other things, costs, fines, penalties, restrictions on Truist's business activities, reputational harm, or other adverse consequences;
- risks related to originating and selling mortgages, including repurchase and indemnity demands from purchasers related to representations and warranties on loans sold, which could result in an increase in the amount of losses for loan repurchases;
- failure to execute on strategic or operational plans, including the ability to successfully complete and/or integrate mergers and acquisitions;
- risks relating to Truist's role as a servicer of loans, including an increase in the scope or costs of the services Truist is required to perform without any corresponding increase in Truist's servicing fee, or a breach of Truist's obligations as servicer;
- negative public opinion, which could damage Truist's reputation;
- increased scrutiny regarding Truist's consumer sales practices, training practices, incentive compensation design and governance;
- competition from new or existing competitors, including increased competition from products and services offered by non-bank financial technology companies, may reduce Truist's client base, cause Truist to lower prices for its products and services in order to maintain market share or otherwise adversely impact Truist's businesses or results of operations;
- Truist's ability to introduce new products and services in response to industry trends or developments in technology that achieve market acceptance and regulatory approval;
- Truist's success depends on the expertise of key personnel, and if these individuals leave or change their roles without effective replacements, Truist's operations and integration activities could be adversely impacted. This could be exacerbated as Truist continues to integrate the management teams of heritage BB&T and heritage SunTrust, or if the organization is unable to hire and retain qualified personnel;
- legislative, regulatory or accounting changes may adversely affect the businesses in which Truist is engaged;
- evolving regulatory standards, including with respect to capital and liquidity requirements, and results of regulatory examinations, may adversely affect Truist's financial condition and results of operations;
- accounting policies and processes require management to make estimates about matters that are uncertain;
- general economic or business conditions, either nationally or regionally, may be less favorable than expected, resulting in, among other things, slower deposit or asset growth, a deterioration in credit quality or a reduced demand for credit, insurance or other services;
- risk management oversight functions may not identify or address risks adequately;
- unfavorable resolution of legal proceedings or other claims or regulatory or other governmental investigations or inquiries could result in negative publicity, protests, fines, penalties, restrictions on Truist's operations or ability to expand its business or other negative consequences, all of which could cause reputational damage and adversely impact Truist's financial condition and results of operations;
- competitors of Truist may have greater financial resources or develop products that enable them to compete more successfully than Truist and may be subject to different regulatory standards than Truist;
- failure to maintain or enhance Truist's competitive position with respect to technology, whether it fails to anticipate client expectations or because its technological developments fail to perform as desired or are not rolled out in a timely manner or for other reasons, may cause Truist to lose market share or incur additional expense;
- fraud or misconduct by internal or external parties, which Truist may not be able to prevent, detect or mitigate;
- operational or communications systems, including systems used by vendors or other external parties, may fail or may be the subject of a breach or cyber-attack that, if successful, could adversely impact Truist's financial condition and results of operations;
- security risks, including denial of service attacks, hacking, social engineering attacks targeting Truist's employees and clients, malware intrusion or data corruption attempts, and identity theft could result in the disclosure of confidential information, adversely affect Truist's business or reputation or create significant legal or financial exposure;
- natural or other disasters, including acts of terrorism and pandemics, could have an adverse effect on Truist, including a material disruption of Truist's operations or the ability or willingness of clients to access Truist's products and services;
- widespread system outages, caused by the failure of critical internal systems or critical services provided by third parties could adversely impact Truist's financial condition and results of operations; and
- depressed market values for Truist's stock and adverse economic conditions sustained over a period of time may require a write down to goodwill.
