Indexation Methodology

Effective July 27, 2021, the Guarantor employs the methodology set out below to determine the indexed valuations for Properties relating to the Loans in the Covered Bond Portfolio (the "Indexation Methodology") for purposes of the Asset Coverage Test, the Amortization Test, the Valuation Calculation, in calculating the value of the covered bond collateral held as Contingent Collateral and for other purposes as may be required by the CMHC Covered Bond Guide (the "CMHC Guide") from time to time. To account for subsequent price developments, the Guarantor has chosen to adjust the original market values of the Properties securing the Loans in the Covered Bond Portfolio by using the Teranet - National Bank House Price Index™ and the Teranet - National Bank Regional and Property Type Sub-Indices™ (collectively the "Indices"), available by subscription at www.housepriceindex.ca. This website and its contents do not form part of this Investor Report. (Equitable Bank does not endorse or accept any responsibility for such sites or their content, privacy policy or security standards.) The Teranet - National Bank House Price Index™ ("HPI Indices") is an independent representation of the rate of change of Canadian single-family home prices. The measurements are based on the property records of public land registries, where sale prices are available. The Teranet - National Bank Regional and Property Type Sub-Indices™ ("Sub-Indices") is an independent representation of the rate of change of Canadian home prices based on property types and regional characteristics. For each region, the Sub-Indices classifies properties into three categories (condo, row housing, single family) and provides an all-types combined index. As of the indicated Calculation Date, the Sub-Indices for the forward sortation area where the property is located is used to calculate the property value. Where a Sub-Indices for the property category is unavailable the Sub-Indices all-types index has been used. The relevant Sub-Indices are used to maintain updated market property values. At least quarterly, property values are updated based on relative changes in Sub-Indices from the time of original valuation, and used in calculating the loan to value ratios. Properties in geographical areas not covered by the Sub-Indices are adjusted with the national average index, as captured by the HPI Indices. Material risks associated with using the Indexation Methodology include, but are not limited to, the factual correctness of the Indices being relied upon, and, in the case of geographical areas not covered by the Sub-Indices, the risk that the HPI Indices may not accurately capture idiosyncratic factors affecting local housing markets. As per the CMHC Guide (June 23, 2017) and pursuant to the definition of Indexation Methodology in the Master Definitions and Construction Agreement, notice of any change in the Indexation Methodology must be provided to CMHC and will be reflected in the then-current Investor Report. Changes to the Indexation Methodology may only be made (i) upon notice to CMHC and satisfaction of any other conditions specified by CMHC in relation thereto, (ii) if such change constitutes a material change, subject to satisfaction of the Rating Agency Condition, and (iii) if such change is materially prejudicial to the Covered Bondholders, subject to the consent of the Bond Trustee. The Indexation Methodology must at all times comply with the requirements of the CMHC Guide.

Overview of Maturity Extension Trigger

If the Final Terms for a Series of Covered Bonds provide that such Covered Bonds are subject to an Extended Due for Payment Date, and the Issuer fails to pay the Final Redemption Amount of the relevant Series of Covered Bonds on the Final Maturity Date (subject to applicable grace periods) and if the Guaranteed Amounts equal to the Final Redemption Amount of the relevant Series of Covered Bonds are not paid in full by the Extension Determination Date (for example because, following the service of a Notice to Pay on the Guarantor, the Guarantor has insufficient moneys available in accordance with the Priorities of Payments), then payment of the unpaid amount pursuant to the Covered Bond Guarantee will be automatically deferred (without a Guarantor Event of Default occurring as a result of such non-payment) and will be due and payable on the applicable Extended Due for Payment Date (subject to any applicable grace period) and interest will continue to accrue and be payable on the unpaid amount in accordance with Condition 5, at the applicable Rate of Interest including, if applicable, as may be determined in accordance with Condition 5.03. To the extent that a Notice to Pay has been served on the Guarantor and the Guarantor has sufficient time and sufficient moneys to pay in part the Guaranteed Amounts corresponding to the relevant Final Redemption Amount in respect of the relevant Series of Covered Bonds, the Guarantor will make such partial payment on any Interest Payment Date up to and including the relevant Extended Due for Payment Date, in accordance with the Priorities of Payments and as described in Condition 6.01 and will pay Guaranteed Amounts constituting Scheduled Interest on each Original Due for Payment Date and the Extended Due for Payment Date with any unpaid portion thereof (if any) becoming due and payable on the Extended Due for Payment Date. Any amount that remains unpaid on any such Interest Payment Date will be automatically deferred for payment until the applicable Extended Due for Payment Date.

Hedging Strategy

The Guarantor of the covered bond program is required, at the time of each transfer of covered bond collateral to the Guarantor entity and each issuance of a series or a tranche of covered bonds, to enter into one or more transactions to mitigate interest rate mismatch or currency mismatch risk. These hedges must be documented using ISDA documentation templates or forms.

Non-Amortizing Loans

Equitable Bank does not offer fixed payment Variable Rate Mortgage ("VRM") that could result in no part of the mortgage principal balance being repaid through regular period payments. Consequently, **the current cover pool balance contains no non-amortizing loans** and all loan principal balances are reduced with each regular payment.
